#### 1 Scope

This specification targets enhanced Mobile Broadband (eMBB) scenario for 5G Sub-6GHz Chipset, Module and Device products testing. It stipulates the 5G device function and performance test in lab for NSA Mode (Option 3/3a/3x) and SA (Option 2).

This specification provides evaluation criteria for basic functions and performance in the 5G test. Considering various test requirements, specific test cases and methods are designed, together with the basic requirements for each test category, number of test devices, and tailored agreements.

This specification is one of the 5G Sub-6GHz device test specifications which are used in GTI 5G Device Certification.

#### 2 Definitions, Symbols and Abbreviations

Abbreviation	Explanation	
AMC	Adaptive Modulation and Coding	
BLER	Block Error Rate	
СР	Cyclic Prefix	
DL	Downlink	
eNB	Evolved NodeB	
EPC	Evolved Packet Core	
GBR	Guaranteed Bit Rate	
MCS	Modulation and Coding Scheme	
МІМО	Multiple Input Multiple Output	
NGBR	Non-Guaranteed Bit Rate	
ОМС	Operation and Maintenance Center	
PDSCH	Physical Downlink Shared Channel	
PUSCH	Physical Uplink Shared Channel	
RSRP	Reference Signal Received Power	
SIMO	Single Input Multiple Output	
SM	Space Multiplexing	
SNR	Signal to Noise Ratio	
UDP	User Datagram Protocol	
UE	User Equipment	
UL	Uplink

#### 4 Test Environment

#### 4.1 Default Test Environment

A network system simulator is used to model the gNB and 5GC. The default configuration of the simulator is described in "3GPP TS 38.508-1, 5GS; User Equipment (UE) conformance specification; Part 1: Common test environment" which contains definitions of reference conditions, test signals, default parameters, reference radio bearer configurations, common requirements for test equipment

and generic procedures.

#### 4.1.1 Special Test Environment

If the test environment doesn't follow the default test environment and is common for several test cases, e.g. special cell configurations, the test environment should be described in this section.

#### 4.1.2 Cell Configuration

#### 4.1.2.1 Test Frequencies

Table 4-1: Test Frequencies for NR TDD

Operating	Frequency	Occupied Bandwidth	Range
Band	Configuration		(F_low – F_high)
n41	f1	100 MHz	2515M - 2615M
	f2	80 MHz	2515M - 2595M
	f3	60 MHz	2515M - 2575M
	f4	100 MHz	2575M - 2675M
n79	f1	100 MHz	4800M - 4900M

Table 4-2: Test Frequencies for E-UTRA TDD

Operating	Frequency	Occupied Bandwidth	Range
Band	Configuration		(F_low – F_high)
34	f1	15 MHz	2010M – 2025M
39	f1	20 MHz	1880M - 1900M
	f2	10 MHz	1900M - 1910M
	f3	15 MHz	1900M - 1915M
	f4	10 MHz	1905M - 1915M
40	f1	20 MHz	2325M - 2345M
	f2	20 MHz	2345M - 2365M
41	f1	20 MHz	2615M - 2635M
	f2	20 MHz	2635M - 2655M
	f3	20 MHz	2655M - 2675M

Table 4-3: Test Frequencies for E-UTRA FDD

Operating	Frequency	Occupied Bandwidth	Range
Band	Configuration		(F_low – F_high)
3	f1	10 MHz	UL: 1710M - 1720M
			DL: 1805M - 1815M
	f2	15 MHz	UL: 1720M - 1735M
			DL: 1815M - 1830M
	f3	20 MHz	UL: 1710M - 1730M
			DL: 1805M - 1825M

Table 4-4: Band combinations for NSA option3 (EN-DC, two bands)

Band Combinations	E-UTRA Band	NR Band	Note
DC_3A_n41A	3A	n41A	Inter-band EN-DC
DC_39A_n41A	39A	n41A	Inter-band EN-DC
DC_3A_n79A	3A	N79A	Inter-band EN-DC
DC_39A_n79A	39A	N79A	Inter-band EN-DC

Table 4-5: Test Frequencies for E-UTRA FDD

GSM Band	Bandwidth	f1(Mid)	f2(High)	f3(Low)
Band 8	25MHz	20	110	5
(GSM 900)		(UL:894MHz/	(UL:912MHz/	(UL:891MHz/
		DL:939MHz)	DL:957MHz)	DL:936MHz)
Band 3 (DCS	75MHz	590	700	515
1800)		(UL:1725.8MHz/	(UL:1747.8MHz/	(UL:1710.8MHz/
		DL:1820.8MHz)	DL:1842.8MHz)	DL:1805.8MHz)

#### 4.1.2.2 Default Configuration

If not explicitly specified in the test case prose, the following Cell Configuration parameters shall be used for NR cells in the test cases

Table 4-4: Default Parameters

Parameters	Value	Note
MCC	460	
MNC	00	
NR Frame Structure for n41	Uplink-Downlink Switch Period: 5ms	DD DD DD DS UU
	Uplink-Downlink Switch Period: 3ms+2ms	DD DS UU DD DD
NR Frame Structure for n79	Uplink-Downlink Switch Period: 2.5 ms	DSUUU DSUUU
Special Frame for n41	DL : GP : UL = 6 : 4 : 4	DDDDDDGGGGUUUU
Special Frame for n79	DL : GP : UL = 10 : 2 : 2	DDDDDDDDDGGUU
CP Length	Normal CP	
PRACH Format	Format 0	
PRACH Period	10ms	
PUCCH Format	Format 0 / Format 1	
	Format 2 / Format 3	
PBCH SCS	30kHz	
PBCH Period	20ms	
PDCCH Symbols	1 symbol	
PDCCH Format	Format 0_1/Format 1_1	
PDSCH DMRS	Mapping type A & Type1	
PUSCH DMRS	Mapping type A & Type1	
PUSCH Transmission	The codebook-based transmission mode	
UL Power Control	ON	
HARQ	ON	
SRS	NR SRS Switching	
MIMO	NSA: NR 1T4R, LTE 1T4R or 1T2R	
	SA: 2T4R	
UE Maximum TX Power	NSA: 26 dBm	
	SA: 26 dBm	
Waveform	Uplink : CP-OFDM	
	Downlink: CP-OFDM	

#### 4.1.3 USIM Parameters

Refer to clause 4.5.3 in 3GPP TS 38.508-1 for the default parameters of the test USIM except for the

#### following parameters

Table 4.2.2-1: USIM Elementary File Parameters

Elementary File	Parameter	Value
EF <sub>IMSI</sub>	(IMSI)	460001234567890
		CMCC China (460, 00, NG-RAN),
		CMCC China (460, 00, EUTRAN),
	(HPLMN selector	CMCC China (460, 00, UTRAN),
	with Access	CMCC China (460, 00, GSM),
		CMCC China (460, 02, UTRAN),
	Technology)	CMCC China (460, 02, GSM),
		CMCC China (460, 07, UTRAN),
EF <sub>HPLMNwAcT</sub>		CMCC China (460, 07, GSM)
K	K Value of the USIM	000102030405060708090A0B0C0D0E0F

Note: The priority of the PLMNs in EFHPLMNwAcT follows top bottom sequence i.e. PLMN on the top has highest priority.

#### 4.2 Applicability for the UE Configuration

This clause defines the types of test case applicability used in this specification. Each test case shall clearly state the applicability in the section of "Applicability"

Туре	Applicability
1	Test cases apply to the devices supporting both SA and NSA
2	Test cases apply to the devices supporting SA Note1
3	Test cases apply to the devices supporting NSA Note2

Note1: Test cases applying to the devices supporting SA also apply to the devices supporting both SA and NSA

Note2: Test cases applying to the devices supporting NSA also apply to the devices supporting both SA and NSA

#### 5 Basic Function

#### 5.1 PLMN Selection

### 5.1.1 PLMN Selection, Multi-RAT Background, Select the highest priority HPLMN, Automatic Mode

#### 5.1.1.1 Test Purpose

The priority of the PLMNs in USIM HPLMN list is 5G>E-UTRAN. Verify the UE can camp on the PLMN with highest priority and setup a PS bearer successfully. Verify the UI display is correct. Use the same PLMN as the real network.

#### 5.1.1.2 Reference specification

3GPP TS 38.304 subclause 5.1

#### 5.1.1.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 5.1.1.4 Test conditions

[SS configuration]

Cell A, Cell B and Cell C are NR cells. Cell D is an E-UTRAN cell.

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

Frequency Configuration = f1

NR Cell B

Cell Id=1 TAC = 1

MCC = 460 MNC = 03

Band n78

Frequency Range = 3400MHz-3500MHz

NR Cell C

Cell Id=1 TAC = 1

MCC = 460 MNC = 01

Band n78

Frequency Range = 3500MHz-3600MHz

E-UTRAN Cell D

Cell Id=2 TAC = 2

MCC = 460 MNC = 00

Frequency Configuration = f1

rootSequenceIndex = 0

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A, Cell B and Cell C are not active.

E-UTRAN Cell D is not active.

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.1.1.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	Parameter	Unit	NR Cell A	NR Cell B	NR Cell C	E-UTRAN	Remark
						Cell D	

T0	SS/PBCH, SSS EPRE	dBm/SCS	-125	-125	-125	/	
	Reference Signal EPRE	dBm/15kHz	/	/	/	-125	
T1	SS/PBCH, SSS EPRE	dBm/SCS	-85	-85	-85	/	
	Reference Signal EPRE	dBm/15kHz	/	/	/	-85	
T2	SS/PBCH, SSS EPRE	dBm/SCS	Not Active	-85	-85	/	
	Reference Signal EPRE	dBm/15kHz	/	/	/	-85	

#### **PREAMBLE**

- 1. Activate NR Cell A, NR Cell B , NR Cell C and E-UTRAN Cell D. The SS configures the transmission of the Master Information Block and starts the System Information Block broadcasting on all cells.
- 2. The SS configures the initial power according to T0 in Table 5.1.1.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The SS increases the TX power of Cells according to T1 in Table 5.1.1.5-1.
- 5. The UE performs Registration procedure on NR Cell A according to subclause 5.4.1 step3-18. SS releases the RRC connection. The UE transits to Idle state.
- 6. The tag on the UI indicate that UE has registered on NR network.
- 7. Deactivate NR Cell A. (Refer Table 5.1.1.5 -1: Time T2). NR Cell B and Cell C remains exist.
- 8. The UE performs TAU procedure on E-UTRAN Cell D. SS releases the RRC connection. The UE transits to Idle state
- 9. The tag on the UI indicate that UE has registered on LTE network.

#### **POSTAMBLE**

- 10. The UE is powered OFF
- 11. The UE performs MO Detach procedure on E-UTRAN Cell D.
- 12. Deactivate NR Cell B, NR Cell C and E-UTRAN Cell D.

Table 5.1.1.5-2: Message Sequence

Step			Message Sequence		Verdict
	U-S	Layer	Message	Specific	
				Contents	
1	+	RRC	Activate NR Cell A, NR Cell B , NR Cell C and		
			E-UTRAN Cell D		
2			Configure the initial power according to T0 in		
			Table 5.1.1.5-1.		
3		UE	Switch On UE	AT Command	
4			Increases the TX power of Cells according to T1 in		
			Table 5.1.1.5-1		
5	$\rightarrow$	RRC	UE performs Registration procedure on NR Cell A		PASS
	<b>←</b>	NAS	according to subclause 5.4.1 step3-18.		
6			The tag on the UI indicate that UE has registered		
			on NR network.		
7			Deactivate NR Cell A. (Refer Table 5.1.1.5 -2: Time		
			T2). NR Cell B and Cell C remains exist.		
8	$\rightarrow$	RRC	UE performs TAU procedure on E-UTRAN Cell D		PASS

	+	NAS			
9			The tag on the UI indicate that UE has registered on LTE network.		
10		UE	Switch Off UE	AT Command	
	$\uparrow \downarrow$	RRC NAS	UE performs MO Detach procedure on E-UTRAN Cell D		
12			Deactivate NR Cell B, NR Cell C and E-UTRAN Cell D.		

#### 5.1.1.6 Expected Result

Step 5, UE could camps on NR Cell A

Step 8, UE could camps on E-UTRAN Cell D

#### 5.2 Cell Selection

#### 5.2.1 Multi-mode Environment Cell Selection, NR Cell Available

#### 5.2.1.1 Test Purpose

Verify that the UE will correctly select and camp on NR cell basend on the cell selection priority (NR > LTE).

#### 5.2.1.2 Reference specification

3GPP TS 38.304, clause 5.2.3.

#### 5.2.1.3 Applicability

This test applies to Type 1 and 2 devices as described in clause 4.2.

#### 5.2.1.4 Test conditions

[SS configuration]

Cell A is a E-UTRAN cell.

Cell B is a NR Cell.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

E-UTRA Band = 41

EARFCN= f1

rootSequenceIndex TDD = 0

Reference Signal EPRE= -91dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR Band = n41

NR-ARFCN= f1

SS/PBCH SSS EPRE = -90 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.2.1.5 Test procedure

Table 5.2.1.5-0: Time instances of cell power level and parameter changes

	Parameter	Unit	E-UTRAN Cell A	NR Cell B	
то	SS/PBCH	dBm/SCS	-85	-90	
	SSS EPRE	ubili/3C3	-63	-30	

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A and NR Cell B. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.2.1.5-0.
- 3. The UE is powered ON.

#### MAIN BODY

4. The UE performs the registration procedure on Cell B (see 38.508, Table 4.5.2.2).

#### **POSTAMBLE**

- 5. The UE is powered OFF.
- 6. Deactivate E-UTRAN Cell A and NR Cell B.

Table 5.2.1.5-1: Message Sequence

Step Message Sequence					Verdict
Step	U-S	Layer	Message	Specific Contents	
1	<b>←</b>	RRC	SS Activates E-UTRAN Cell A and Cell B		
2			The SS configures the initial power		
2			according to T0 in Table 5.2.1.5-1		

3		UE	Switch On UE	AT Command	
4	$\rightarrow$	NAS	The UE performs the registration procedure		PASS
4	<b>←</b>	RRC	on Cell B (see 38.508, Table 4.5.2.2)		
5		UE	Switch Off UE	AT Command	
6			Deactivate E-UTRAN Cell A and NR Cell B.		

#### 5.2.1.6 Expected Result

Step 4, UE could select NR Cell B and camps on the NR Cell B

#### 5.2.2 Multi-mode Environment Cell Selection, E-UTRAN Available

#### 5.2.2.1 Test Purpose

Verify that the UE will correctly select and camp on E-UTRAN cell when E-UTRAN cell available but no NR cell available.

#### 5.2.2.2 Reference specification

3GPP TS 36.304, clause 5.2.3.

#### 5.2.2.3 Applicability

This test applies to Type 1 and 2 devices as described in clause 4.2.

#### 5.2.2.4 Test conditions

[SS configuration]

Cell A is a TD-LTE cell.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

E-UTRA Band = 41

EARFCN= f1

rootSequenceIndex TDD = 0

Reference Signal EPRE= -85dBm/15kHz

upperLayerIndication-r15=true

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in 4G mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.2.2.5 Test procedure

Table 5.2.2.5-1: Time instances of cell power level and parameter changes

	Parameter	Unit	E-UTRAN Cell A
то	SS/PBCH	dBm/SCS	-85
10	SSS EPRE	ивпі/зсз	-83

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.2.2.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).

#### **POSTAMBLE**

- 5. The UE is powered OFF.
- 6. Deactivate E-UTRAN Cell A.

Table 5.2.1.5-1: Message Sequence

Ston	Message Sequence				
Step	U-S	Layer	Message	Specific Contents	
1	<b>←</b>	RRC	SS Activates E-UTRAN Cell A		
2			The SS configures the initial power		
			according to T0 in Table 5.2.2.5-1.		
2		UE	Switch On UE	AT Command	
	$\rightarrow$	NAS	The UE performs the registration procedure		PASS
3	<b>←</b>	RRC	with activation of the initial default EPS		
			bearer on Cell A (see 36.508, 4.5.2 ).		
4	4 UE S		Switch Off UE	AT Command	
5			Deactivate E-UTRAN Cell A.		

#### 5.2.2.6 Expected Result

Step 3, UE could select the E-UTRA cell A and camp on the E-UTRA cell A

#### 5.2.3. Multi-mode Environment Cell Selection, NR Cell Available

#### 5.2.3.1. Test Purpose

When SA NR cell and NSA PS-Cell(NR) available, UE could camps on the NR cell

#### 5.2.3.2. Reference specification

3GPP TS 38.304, clause 5.2.3.

#### 5.2.3.3. Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 5.2.3.4. Test conditions

[SS configuration]

Cell A is a NR cell.

Cell B is a NR Cell.

Cell B supports NSA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.2.3.5. Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	Parameter	NR Cell A	NR Cell B
T0	SS/PBCH	-85	-85
	SSS EPRE		

#### **PREAMBLE**

- 1. Activate NR Cell A and Cell B. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.2.3.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2).

#### **POSTAMBLE**

- 5. The UE is powered OFF.
- 6. Deactivate NR Cell A and NR Cell B.

Table 5.2.3.5-1: Message Sequence

Cton	Message Sequence				
Step	U-S	Layer	Message	Specific Contents	
1	<b>←</b>	RRC	SS Activates NR Cell A and Cell B		
2	The SS configures the initial power according		The SS configures the initial power according		
			to T0 in Table 5.2.3.5-1.		
3		UE Switch On UE		AT Command	
4	$\rightarrow$	NAS	The UE performs the registration procedure		PASS
4	<b>←</b>	RRC	on Cell A (see 38.508, Table 4.5.2.2 ).		
5	5 UE Switch Off UE		AT Command		
6			Deactivate NR Cell A and NR Cell B.		

#### 5.2.3.6. Expected Result

Step 4 UE selects the NR Cell A and camps on the Cell A.

#### 5.2.4. Multi-mode Environment Cell Selection, NSA Cell Available

#### 5.2.4.1. Test Purpose

Verify that the UE will correctly select and camp on NSA E-UTRAN cell when NSA E-UTRAN cell available and no NR cell

#### 5.2.4.2. Reference specification

3GPP TS 36.304, clause 5.2.3.

#### 5.2.4.3. Applicability

This test applies to type 1 devices as described in clause 4.2.

#### 5.2.4.4. Test conditions

[SS configuration]

Cell A is a TD-LTE cell.

Cell B is a NR Cell.

Cell A supports NSA.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

E-UTRA Band = 41

EARFCN= f1

Bandwidth = 20 MHz

rootSequenceIndex TDD = 0

Reference Signal EPRE= -85dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -85 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

NR Cell B is barred with cellBarred IE in MIB

UE

UE is powered off

#### 5.2.4.5. Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	Parameter	E-UTRAN Cell A	NR Cell B
T0	SS/PBCH	-85	-85
	SSS EPRE		

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A and Cell B. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.2.4.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).

#### **POSTAMBLE**

- 5. The UE is powered OFF.
- 6. Deactivate E-UTRAN Cell A and NR Cell B.

Table 5.2.4.5-1: Message Sequence

Chan	Message Sequence				
Step	U-S	Layer	Message	Specific Contents	
1	<b>←</b>	RRC	SS Activates E-UTRAN Cell A and Cell B		
2			The SS configures the initial power according		
2		to T0 in Table 5.2.4.5-1			
3		UE	Switch On UE	AT Command	
	$\rightarrow$	NAS	The UE performs the registration procedure		PASS
4	<b>←</b>	RRC	with activation of the initial default EPS		
			bearer on Cell A (see 36.508, 4.5.2 ).		
5 UE		UE	Switch Off UE	AT Command	
6			Deactivate E-UTRAN Cell A and NR Cell B.		

#### 5.2.4.6. Expected Result

Step 4 UE selects the E-UTRAN Cell A and camps on the Cell A.

#### 5.2.5 Initial Cell Selection from Power-Up

23

#### 5.2.5.1 Test Purpose

Verify that the UE will correctly select and camp on the right NR cell based on channel quality from power-up when inter-frequency cells with different bandwidth and inter-band cell existing simultaneously.

#### 5.2.5.2 Reference specification

3GPP TS 38.304, clause 5.2.3.

#### 5.2.5.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 5.2.5.4 Test conditions

[SS configuration]

Cell A is a NR Serving Cell, Cell B and Cell C are inter-frequency cell and Cell D is inter-band cell.

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

Band=n41

NR-ARFCN= f4

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

Band=n41

NR-ARFCN= f3

NR Cell C

Cell Id=03 TAC = 01

MCC = 460 MNC = 00

Band=n41

NR-ARFCN= f2

NR Cell D

Cell Id=04 TAC = 01

MCC = 460 MNC = 00

Band=n79

NR-ARFCN= f1

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.2.5.5 Test procedure

Table 5.2.5.5-0: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell A	Cell B	Cell C	Cell D
ТО			-88	-94	-94	-94
T1	SS/PBCH	dDm/ccc	-94	-88	-94	-94
T2	SSS EPRE	dBm/SCS	-94	-94	-88	-94
Т3			-94	-94	-88	-94

#### **PREAMBLE**

- 1. Activate NR CellA,NR CellB,NR CellC,NR CellD. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.2.5.5-0.

#### MAIN BODY

- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2).
- 5. The UE is powered OFF.
- 6. The SS configures the initial power according to T1 in Table 5.2.5.5-0.
- 7. The UE is powered ON.
- 8. The UE performs the registration procedure on Cell B (see 38.508, Table 4.5.2.2).
- 9. The UE is powered OFF.
- 10. The SS configures the initial power according to T2 in Table 5.2.5.5-0.
- 11. The UE is powered ON.
- 12. The UE performs the registration procedure on Cell C (see 38.508, Table 4.5.2.2).
- 13. The UE is powered OFF.
- 14. The SS configures the initial power according to T2 in Table 5.2.5.5-0.
- 15. The UE is powered ON.
- 16. The UE performs the registration procedure on Cell D (see 38.508, Table 4.5.2.2).

#### **POSTAMBLE**

- 17. The UE is powered OFF.
- 18. Deactivate NR CellA,NR CellB,NR CellC,NR CellD.

Table 5.2.5.5-1: Message Sequence

Step	Message Sequence	Verdict	l
------	------------------	---------	---

	U-S	Layer	Message	Specific Contents	
1		RRC	Activate NR Cell A,NR Cell B,NR Cell C,NR Cell D		
2 SS		SS	The SS configures the initial power according to		
			T0 in Table 5.2.5.5-0.		
3		UE	Switch On UE	AT Command	
4	$\rightarrow$	NAS	The UE performs the registration procedure on		PASS
4	<b>←</b>	RRC	Cell A (see 38.508, Table 4.5.2.2 )		
5		UE	Switch Off UE	AT Command	
6		SS	The SS configures the initial power according to		
			T1 in Table 5.2.5.5-0.		
7		UE	Switch On UE	AT Command	
8	$\rightarrow$	NAS	The UE performs the registration procedure on		PASS
	<b>←</b>	RRC	Cell B (see 38.508, Table 4.5.2.2 )		
10		SS	The SS configures the initial power according to T2 in		
			Table 5.2.5.5-0.		
11		UE	Switch On UE	AT Command	
12	$\rightarrow$	NAS	The UE performs the registration procedure on		PASS

16	$\rightarrow$	NAS	The UE performs the registration procedure on		PASS
	<b>←</b>	RRC	Cell D (see 38.508, Table 4.5.2.2 )		
17		UE	Switch Off UE	AT Command	
18			Deactivate NR CellA,NR CellB,NR CellC,NR CellD.		

#### 5.2.5.6 Expected Result

Step 4, UE could select NR Cell A and camp on the NR Cell A

Step 8, UE could select NR Cell C and camps on the NR Cell B

Step 12, UE could select NR Cell A and camp on the NR Cell C

Step 16, UE could select NR Cell C and camps on the NR Cell D

#### 5.3 RRC connection/connection reconfiguration

## 5.3.1 RRC connection re-establishment, radio link failure, re-establish to a Prepared Inter-Freq cell

#### 5.3.1.1 Test Purpose

When UE in RRC\_CONNECTED state, verify that UE could re-establish the RRC connection on the prepared Inter-Freq cell.

#### 5.3.1.2 Reference specification

3GPP TS 38.331 clauses 5.3.7, 5.3.10 3GPP TS 38.304 clause 5.2.3

#### 5.3.1.3 Applicability

This test applies to Type 1 and 2 devices as described in clause 4.2

#### 5.3.1.4 Test conditions

[SS configuration]

Cell A is a NR cell.

Cell B is a NR Cell.

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30 kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.3.1.5 Test procedure

Table 5.3.1.5-0: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell A	Cell B	
то	SS/PBCH	dDm /CCC	00	Nigh Aghing	
	SSS EPRE	dBm/SCS	-88	Not Active	

T1	SS/PBCH	dBm/SCS	Not Active	-88
	SSS EPRE	ability 3 cs	Notrictive	

#### **PREAMBLE**

- 1. Activate NR CellA,NR CellB. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.3.1.5-0.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2 till Step 18).

#### MAIN BODY

- 5. The SS configures the initial power according to T1 in Table 5.3.1.5-0.
- 6. Verify that UE sends RRCReestablishmentRequest message on NR cell B.
- 7. SS sends RRCReestablishment to UE on NR cell B.
- 8. UE sends RRCReestablishmentComplete message to SS on NR cell B.

#### **POSTAMBLE**

- 9. The UE is powered OFF.
- 10. Deactivate NR CellA, NR CellB.

Table 5.3.1.5-1: Message Sequence

			5 1		
Cton			Message Sequence		Verdict
Step	U-S	Layer	Message	Specific Contents	
1	1 ← RRC Activate NR CellA,NR CellB.

8	$\rightarrow$	RRC	UE sends RRCReestablishment-		
0			Complete message to SS on NR cell B		
9		UE	The UE is powered OFF. AT Command		
10	10 Deactivate NR CellA,NR CellB.				

#### 5.3.1.6 Expected Result

28

Step 4, UE could select NR Cell A and camp on the NR Cell A

Step 6, UE sends RRCReestablishmentRequest message on NR cell B

#### 5.3.2 BWP configuration, downlink and uplink BWP addition /release

#### 5.3.2.1 Test Purpose

When UE in RRC\_CONNECTED state, verify that UE could add and release downlink and uplink BWP correctly.

#### 5.3.2.2 Reference specification

3GPP TS 38.331 clause 5.3.5.

#### 5.3.2.3 Applicability

This test applies to the device that supports SA or SA+NSA

#### 5.3.2.4 Test conditions

[SS configuration]

Cell A is a NR cell.

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.3.2.5 Test procedure

Table 5.3.2.5-0: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell A	
то.	SS/PBCH	dDm/CCC	O.F.	
T0	SSS EPRE	dBm/SCS	-85	

#### **PREAMBLE**

- 1. Activate NR CellA The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.3.2.5-0.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2 till Step 18).

#### MAIN BODY

- 5. SS sends RRCReconfiguration to UE on NR cell A.
- 6. Verify that UE sends RRCReconfigurationComplete message to SS on NR cell A.

#### **POSTAMBLE**

- 7. The UE is powered OFF.
- 8. Deactivate NR CellA.

Table 5.3.2.5-1: Message Sequence

Step	Message Sequence					
	U-S	Layer	Message	Specific Contents		
1	+	RRC	Activate NR CellA			
			The SS configures the initial power according to			
2			T0 in Table 5.3.2.5-0			
3		UE	The UE is powered ON.	AT Command		
4	$\rightarrow$	NAS	The UE performs the registration procedure on		PASS

			RRCReconfigurationComplete message to SS on			
			NR cell A.			
7		UE	The UE is powered OFF.	AT Command		
8			Deactivate NR CellA.			

#### 5.3.2.6 Expected Result

Step 4, UE could select NR Cell A and camp on the NR Cell A

Step 6, UE sends RRCReconfigurationComplete message on NR cell A.

#### 5.4 Registration/De-registration

#### 5.4.1 Initial Registration, SA

#### 5.4.1.1 Test Purpose

Verify the UE can register on NR Cell successfully.

#### 5.4.1.2 Reference specification

3GPP TS 24.501, clause 5.5 3GPP TS 24.501, clause 6.4

#### 5.4.1.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 5.4.1.4 Test conditions

[SS configuration]

Cell A is a NR cell.

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.4.1.5 Test procedure

#### **PREAMBLE**

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The UE is powered ON.

#### MAIN BODY

- 3. The UE sends an RRCConnectionRequest message.
- 4. The SS sends an RRCConnectionSetup message.
- 5. The UE sends an RRCConnectionSetupComplete message including the REGISTRATION REQUEST message to initiate the the registration procedure.
- 6. The SS sends an AUTHENTICATION REQUEST message to initiate the 5G AKA based primary authentication and key agreement procedure.

- 7. The UE sends the AUTHENTICATION RESPONSE message.
- 8. The SS sends a NAS SECURITY MODE COMMAND message to activate NAS security.
- 9. The UE sends a NAS SECURITY MODE COMPLETE message
- 10. The SS sends a SecurityModeCommand message to activate AS security.
- 11. The UE sends a SecurityModeComplete message and establishes the initial security configuration.
- 12. The SS sends a UECapabilityEnquiry message to initiate the UE radio access capability transfer procedure.
- 13. The UE sends a UECapabilityInformation message to transfer UE radio access capability.
- 14. The SS sends an REGISTRATION ACCEPT message.
- 15. The UE sends an REGISTRATION COMPLETE message.
- 16. The UE sends an PDU SESSION ESTABLISHMENT REQUEST message, verify that PDU session type is IPv4v6.
- 17. The SS sends an RRCConnectionReconfiguration message to establish the default bearer, and PDU SESSION ESTABLISHMENT ACCEPT is piggybacked.
- 18. The UE sends an RRCConnectionReconfigurationComplete message

#### **POSTAMBLE**

- 19. The UE is powered off
- 20. The UE sends a DEREGISTRATION REQUEST message.
- 21. The SS initiates a RRC release procedure.
- 22. Deactivate NR Cell A.

#### 5.4.1.6 Expected Result

Verify the UE can register on NR Cell successfully.

#### 5.5 NSA

#### 5.5.1 Multi-mode Environment Cell selection for NSA

#### 5.5.1.1 Test Purpose

Verify that the UE will correctly select and camp on a LTE cell based on channel quality from power-up when LTE and NSA NR cell both exist.

#### 5.5.1.2 Reference specification

3GPP TS 36.304, clause 5.2.3.

#### 5.5.1.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

#### 5.5.1.4 Test conditions

[SS configuration]

Cell A is a E-UTRAN cell and also NSA MCG. Cell B and Cell C are 4G only cell Cell D is a NR Cell (NSA SCG, not SA NR cell).

E-UTRAN Cell A Cell Id=01 TAC = 01

```
MCC-MNC = 460-00
EARFCN= f1
rootSequenceIndex = 0
Reference Signal EPRE= -85 dBm/15kHz
upperLayerIndication-r15=true
E-UTRAN Cell B
Cell Id=02 TAC = 02
MCC-MNC = 460-00
Band = B41
EARFCN= f2
rootSequenceIndex = 0
Reference Signal EPRE= -94 dBm/15kHz
upperLayerIndication-r15=false
E-UTRAN Cell C
Cell Id=03 TAC = 03
MCC-MNC = 460-00
Band = B41
EARFCN= f3
rootSequenceIndex = 0
Reference Signal EPRE= -94 dBm/15kHz
upperLayerIndication-r15=false
NR Cell D
Cell Id=01 TAC = 01
MCC = 460 MNC = 00

11	Reference Signal EPRE	dBm/15kHz	-94	-88	-94	/
тэ	SS/PBCH, SSS EPRE	dBm/SCS	/	/	-88	-88
T2	Reference Signal EPRE	dBm/15kHz	-94	-94	-88	/

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, Cell B, Cell C and NR Cell D. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.5.1.5-0.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell D as NR PS-Cell with Split DRB. RRCConnectionReconfiguration message contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- The UE sends an ULInformationTransfer message containing the ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message. The RRC connection is released by the SS.
- 10. The UE is powered OFF.
- 11. The SS configures the initial power according to T1 in Table 5.5.1.5-0.
- 12. The UE is powered ON. Verify that the UE performs the registration procedure on Cell B(see 38.508, Table 4.5.2.2).
- 13. The UE is powered OFF.
- 14. The SS configures the initial power according to T2 in Table 5.5.1.5-0.
- 15. The UE is powered ON. Verify that the UE performs the registration procedure on Cell C(see 38.508, Table 4.5.2.2).

#### **POSTAMBLE**

- 16. The SS initiates a paging preocedure to establish RRC connection for DETACH.
- 17. The SS initiates a MT Detach procedure.
- 18. The SS initiates a RRC release procedure.
- 19. Deactivate E-UTRAN Cell A , Cell B, Cell C and NR Cell D.

Table 5.1.1.5-1: Message Sequence

Step	Message Sequence					
	U-S	Layer	Message	Specific Contents

			to T1 in Table 5.5.1.5-0.			
12	$\rightarrow$	NAS	The UE is powered ON and performs the		PASS	
	<b>←</b>	RRC	registration procedure on Cell B(see 38.508,			
			Table 4.5.2.2 ).			
13			The UE is powered OFF.			
14			The SS configures the initial power according			
			to T1 in Table 5.5.1.5-0.			
15	$\rightarrow$	NAS	The UE is powered ON and performs the		PASS	
	<b>←</b>	RRC	registration procedure on Cell C(see 38.508,			
			Table 4.5.2.2 ).			
16	$\rightarrow$	RRC	SS initiates a paging preocedure to establish			
	+		RRC connection for DETACH.			
17	$\rightarrow$	NAS	SS initiates a MT Detach procedure.			
	<b>←</b>					
18	+	RRC	SS initiates a RRC release procedure.			
19			Deactivate E-UTRAN Cell A and NR Cell B			

### 5.5.1.6 Expected Result

Step 4, UE could correctly select and camp on the E-UTRAN cell A

Step 6, UE could correctly report its EN-DC capability

Step 8 and 9, UE could support the establishment of NSA SCG.

Step 12, UE could correctly select and camp on the E-UTRAN cell B

Step 15, UE could correctly select and camp on the E-UTRAN cell C

## 5.5.2 Initial Registration, NSA

## 5.5.2.1 Test Purpose

Verify the UE can support NSA, and the data transmission can be performed successfully on PS-Cell after adding PS-Cell .

#### 5.5.2.2 Reference specification

3GPP TS 38.331, clause 5.3.5

#### 5.5.2.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

#### 5.5.2.4 Test conditions

[SS configuration]

Cell A is a E-UTRAN cell.

Cell B is a NR Cell.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -94 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 5.5.2.5 Test procedure

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A and Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The UE is powered ON.

#### MAIN BODY

- 3. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 4. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 5. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 6. Verify the data transmission is performed successfully on Cell A.
- The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with Split DRB. RRCConnectionReconfiguration message contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. The UE sends an ULInformationTransfer message containing the ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message.
- 10. Verify the downlink data transmission is performed successfully on Cell B.
- 11. Verify the uplink data transmission is performed successfully on Cell B.

- 12. The SS initiates a Detach procedure.
- 13. The SS initiates a RRC release procedure.
- 14. Deactivate E-UTRAN Cell A and NR Cell B.

Table 5.5.2.5-1: Message Sequence

Step		Message Sequence				
	U-S	U-S Layer Message		Specific Contents		
1	<b>←</b>	RRC	SS Activates E-UTRAN Cell A and Cell B

			containing the ACTIVATE DEDICATED EPS	
			BEARER CONTEXT ACCEPT message	
10			Verify the downlink data transmission is	
			performed successfully on Cell B.	
11			Verify the uplink data transmission is performed	
			successfully on Cell B.	
12	<b>→</b>	NAS	SS initiates a Detach procedure.	PASS
	+			
13	+	RRC	SS initiates a RRC release procedure.	
14			Deactivate E-UTRAN Cell A and NR Cell B.	

### Expected Result

Verify the UE can support NSA, and the data transmission can be performed successfully on PS-Cell after adding PS-Cell.

## 5.5.3 Bandwidth Part Configuration, SCG, EN-DC

## 5.5.3.1 Test Purpose

When UE in RRC\_CONNECTED state with EN-DC, and, MCG (E-UTRA PDCP) and SCG, verify when UE receives an RRCConnectionReconfiguration message to configure a BandwidthPart for SCG, UE configures BandwidthPart for SCG and sends an RRCConnectionReconfigurationComplete message.

## 5.5.3.2 Reference specification

3GPP TS 38.331, clause 5.3.5

## 5.5.3.3 Applicability

This test applies to type 1 and 3 devices as described in clause 4.2.

#### 5.5.3.4 Test conditions

[SS configuration]

Cell A is a E-UTRAN cell.

Cell B is a NR Cell.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -94 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

### 5.5.3.5 Test procedure

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A and NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The UE is powered ON.

### MAIN BODY

3. The UE performs the registration procedure with activation of the initial default EPS bearer

on Cell A (see 36.508, 4.5.2).

- 4. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 5. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration
  message to add Cell B as NR PS-Cell with Split DRB. RRCConnectionReconfiguration message
  contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message.
- 7. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 8. The UE sends an ULInformationTransfer message containing the ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message.
- 9. Verify the data transmission is performed successfully by using BWP-ID = 0 on Cell B.
- 10. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add a UL BWP and DL BWP(BWP-ID=1).
- 11. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 12. Switch to the new BWP(BWP-ID=1).
- 13. Verify the data transmission with the new BWP is performed successfully on Cell B.
- 14. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to delete a UL BWP and DL BWP(BWP-ID=1).
- 15. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 16. Verify the data transmission is performed successfully by using BWP-ID = 0 on Cell B.

- 17. The SS initiates a Detach procedure.
- 18. The SS initiates a RRC release procedure.
- 19. Deactivate E-UTRAN Cell A and NR Cell B.

Table 5.1.1.5-1: Message Sequence

Step			Message Sequence		Verdict
	U-S	Layer	Message	Specific Contents	
1	<b>←</b>	RRC	SS Activates E-UTRAN Cell A and Cell B

message containing NR	
RRCReconfigurationComplete message.	
16 Verify the data transmission is performed	
successfully on Cell B as previous	
BWP((BWP-Id=0).	
17 → NAS SS initiates a Detach procedure.	PASS
<del>                                      </del>	
18 ← RRC SS initiates a RRC release procedure.	

# 5.5.3.6 Expected Result

Verify the UE can add UL BWP and DL BWP(BWP-Id=1) successfully.

Verify the data transmission with the new BWP(BWP-Id=1) is performed successfully.

Verify the UE can delete UL BWP and DL BWP(BWP-Id=1) successfully.

#### 5.5.4 NSA-RLF

#### 5.5.4.1 Radio Link Failure in LTE P-Cell

### **5.5.4.1.1 Test Purpose**

When UE enters RLF condition while connected in EN-DC mode, verify whether it can reestablish in same P-Cell and enter again to EN-DC connected mode with Data Continuity.

### 5.5.4.1.2 Reference specification

TS 38.304, TS 38.331, TS 38.300, TS 36.331

## 5.5.4.1.3 Applicability

This test applies to the device that supports NSA or SA+NSA.

#### 5.5.4.1.4 Test conditions

[SS configuration]

Cell A is E-UTRAN Cell, CellB is a NR Cell.

Cell A supports NSA

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

E-UTRA Band = 39

EARFCN= f1

Bandwidth = 20 MHz

rootSequenceIndex TDD = 0

Reference Signal EPRE= -85 dBm/15kHz

 $upper Layer Indication \hbox{-} r15 \hbox{-} true$ 

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR Band = n41

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

### 5.5.4.1.5 Test procedure

Table 5.5.4.1.5-1: Time of cell power level and parameter changes

		•	C
Time	E-UTRAN	NR	Remark
	Cell A	Cell B	
ТО	-85	-90	
T1	-145	-90	Condition RLF in EUTRAN Cell A
T2	-85	-90	

### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.5.4.1.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with Split DRB.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. Verify that Data tranfer(Ping) performed on both EUTRAN Cell A and NR cell B

#### MAIN BODY

- 10. The SS configures the power level of the cells according to T1 in Table 5.5.4.1.5-1
- 11. Wait for T310 Expiry and SS configures the power level of the cells according to T2 in Table 5.5.4.1.5-1
- 12. Verify that UE initiates the RRC Connection Reestablishment request and completes the Reestablishment procedures
- 13. Verify that Data transfer(Ping) continued in EUTRAN cell A after reestablishment procedure
- 14. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell.
- 15. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 16. Verify that Data tranfer(Ping) continued on both EUTRAN Cell A and NR cell B

- 17. The SS initiates a Detach procedure.
- 18. The SS initiates a RRC release procedure.
- 19. Deactivate E-UTRAN Cell A and NR Cell B.

Table 5.1.1.5-2: Message Sequence

Step			Verdict		
	U-S	Layer	Message	Specific Contents

21			Deactivate E-UTRAN Cell A and NR Cell B.		

# 5.5.4.1.6 Expected Result

When RLF introduced in EN-DC cell, UE should first Reestablish in P-Cell

## 5.5.4.2 Radio Link Failure in NR PS-Cell - Reattaching to the same PS-Cell

## **5.5.4.2.1 Test Purpose**

When UE enters RLF condition in PS-Cell while connected in EN-DC mode, verify whether it can detect and attach in same PS-Cell and enter again to EN-DC connected mode with Data Continuity.

### 5.5.4.2.2 Reference specification

TS 38.304, TS 38.331, TS 38.300, TS 36.331

### 5.5.4.2.3 Applicability

This test applies to the device that supports NSA or SA+NSA.

#### 5.5.4.2.4 Test conditions

[SS configuration]
Cell A is E-UTRAN Cell, CellB is a NR Cell.
Cell A supports NSA

E-UTRAN Cell A
Cell Id=01 TAC = 01
MCC-MNC = 460-00
E-UTRA Band = 39

Bandwidth = 20 MHz

EARFCN= f1

rootSequenceIndex TDD = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR Band = n41

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

### 5.5.4.2.5 Test procedure

Table 5.5.4.2.5-1: Time of cell power level and parameter changes

Time	E-UTRAN	NR	Remark
	Cell A	Cell B	
ТО	-85	-90	
T1	-85	-145	Condition RLF in NR Cell B
T2	-85	-90	

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.5.4.2.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with Split DRB.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. Verify that Data tranfer(Ping) performed on both EUTRAN Cell A and NR cell B

#### MAIN BODY

- 10. The SS configures the power level of the cells according to T1 in Table 5.5.4.2.5-1
- 11. Verify that UE sends SCGFailureInformationNR with failure type set as 't310-expiry' after T310 seconds
- 12. The SS configures the power level of the cells according to T2 in Table 5.5.4.2.5-1
- 13. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell.

- 14. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 15. Verify that Data tranfer(Ping) performed on both EUTRAN Cell A and NR cell B

- 16. The SS initiates a Detach procedure.
- 17. The SS initiates a RRC release procedure.
- 18. Deactivate E-UTRAN Cell A and NR Cell B.

## **PREAMBLE**

1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.

- 2. The SS configures the initial power according to T0 in Table 5.6.2.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with Split DRB.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. Verify that Data tranfer(Ping) perofrmed on NR cell B

#### MAIN BODY

- Send RRCConnectionReconfiguration message containing NR RRCReconfiguration to configure NR Measurement Objects, Report configuration, Report Quantity, Codebook Configuration(Type 1), Resource periodicity and offset to the UE
- 11. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 12. SS sends DCI to trigger the Aperiodic CSI-RS Measurements to the UE
- 13. Verify that CSI-RS measurements are received for the NR cell

- 14. The SS initiates a Detach procedure.
- 15. The SS initiates a RRC release procedure.
- 16. Deactivate E-UTRAN Cell A and NR Cell B.

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 5.7.2.5 Test procedure

Table 5.1.1.55-1: Time of cell power level and parameter changes

Time	NR	Remark
	Cell A	

T0	-75	

#### **PREAMBLE**

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.7.2.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2-2 till Step 18 ).
- 5. Verify that Data tranfer(Ping) perofrmed on NR cell A

### MAIN BODY

- 6. The RRC connection is released by the SS with suspendConfig. The UE enters Registered, Inactive Mode
- 7. Wait for t380 timer duration
- 8. After t380 expiry Verify that UE is initiating RRC Resume Procedure by sending RRCResumeRequest with resume cause set as 'rna-Update' to SS
- 9. SS transmits RRCResume message to the UE
- 10. Verify that UE is sending RRCResumeComplete to SS
- 11. Verify that Data tranfer(Ping) perofrmed on NR cell A

- 12. The SS initiates a Deregitration procedure.
- 13. The SS initiates a RRC release procedure.
- 14. Deactivate NR Cell A.

Table 5.1.1.5-2: Message Sequence

Step			Message Sequence		Verdict
	U-S	Layer	Message	Specific Contents	
			Connect the power consumption tester to		
		the UE			
1	← RRC Activate NR Cell A.				
2		SS configures the initial power according to			
	T0 in Table 5.7.2.5-1.				
3	UE Switch On UE AT Command		AT Command		
4	→ NAS UE performs the registration procedure (see			PASS	
	← RRC 38.508, Table 4.5.2.2-2 till Step 18 ).				
5			Verify the data transmission is performed		PASS

			successfully on NR Cell A.	
6	+	RRC	The RRC connection is released by the SS	
			with suspendConfig.	
7			Wait for t380 timer duration

			successfully on NR Cell A.	
12	$\rightarrow$	NAS	SS initiates a Deregitration procedure.	PASS
	+			
13	+	RRC	SS initiates a RRC release procedure.	
14			Deactivate NR Cell A.	

# 5.7.2.6 Expected Result

Verify that when t380 expired, UE is initiating RRC Connection Resume Procedure

# 5.7.3 RNA Update in RRC Inactive Mode for Cell Reselection to new RNA cell

# 5.7.3.1 Test Purpose

When UE is reselecting into new RNA Cell while in RRC Inactive Mode, verify that it initiates RRC Resume Procedure to update the RNA

# 5.7.3.2 Reference specification

TS 38.304, TS 38.331, TS 38.300

# 5.7.3.3 Applicability

This test applies to the device that supports SA or SA+NSA.

### 5.7.3.4 Test conditions

[SS configuration]

Cell A and Cell B are NR Cells.

Cell A and Cell B supports only SA

NR Cell A
Cell Id=01 TAC = 01
MCC = 460 MNC = 00
NR Band = n41
NR-ARFCN= f1
Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -125 dBm/30kHz

T380 = min10

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR Band = n41

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -125 dBm/30kHz

T380 = min5

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

19			Deactivate NR Cell A, NR Cell B, NR Cell C, NR	
			Cell D	

# 6.1.1.1.6 Expected Result

Verify the UE correctly reselect and camp on a serving cell with different preamble format.

# 6.1.2 Intra-system handover

# 6.1.2.1 Intra-freq HO with IP data transfer

# 6.1.2.1.1 Test Purpose

Execute handovers between two NR Intra-frequency neighbour cells with IP data transfer.

- 1), Perform non-contention based random access procedure and lossless handover.
- 2), Perform Contention based random access procedure and lossless handover.

Verify the UE is able to maintain the service.

# 6.1.2.1.2 Reference specification

3GPP TS 38.331 subclause 5.3.5 and 5.5

### 6.1.2.1.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 6.1.2.1.4 Test conditions

[SS configuration]

Cell A and Cell B are intra-freq NR cells.

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz

NR Cell B

Cell Id=2 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active.

NR Cell B is not active.

The test shall be performed under ideal radio conditions.

UE

UE is powered off.

# 6.1.2.1.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	NR Cell B	Remark
T0	-85	Not Active	
T1	-91	-85	
T2	-85	-91	

### **PREAMBLE**

1. Activate NR Cell A and NR Cell B.The SS configures the transmission of the Master

Information Block and starts the System Information Block broadcasting on all cells.

- 2. The SS configures the initial power according to T0 in Table 6.1.2.1.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The UE performs Registration procedure on NR Cell A according to subclause 5.4.1 step3-18. A3 measurement is configured in RRC CONNECTION RECONFIGURATION message.
- 5. Verify the data transmission is performed successfully on Cell A.
- 6. The SS changes the cell power according to T1 in table 6.1.2.1.5-1.
- 7. The UE performs measurements on the neighbor Cell B and provides measurement reports (Event A3) to the SS.
- 8. The SS initiates a handover to Cell B by sending a RRC CONNECTION RECONFIGURATION message. The RRC CONNECTION RECONFIGURATION message contains CFRA in RACH-ConfigDedicated in order to trigger non-contention based random access to the target cell. A3 measurement is configured in RRC CONNECTION RECONFIGURATION message. Cell B becomes the serving cell and Cell A becomes the new neighbor cell.
- 9. The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message and proceeding CFRA procedure on target Cell B.
- 10. Verify the data transmission is continued on Cell B.
- 11. The SS changes the cell power according to T2 in table 6.1.2.1.5-1.
- 12. The UE performs measurements on the neighbor Cell A and provides measurement reports (Event A3) to the SS.
- 13. The SS initiates a handover to Cell A by sending a RRC CONNECTION RECONFIGURATION message. The RRC CONNECTION RECONFIGURATION message does not contain CFRA in RACH-ConfigDedicated in order to trigger contention based random access to the target cell. Cell A becomes the serving cell and Cell B becomes the new neighbor cell.
- 14. The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message and proceeding CBRA procedure on target Cell A.
- 15. Verify the data transmission is continued on Cell A.

- 16. SS initiates a de-registration procedure.
- 17. The SS initiates a RRC release procedure.
- 18. Deactivate NR Cell A and NR Cell B.

Table 5.1.1.5-2: Message Sequence

Step		Message Sequence			Verdict

# 6.1.2.1.6 Expected Result

Verify the UE can perform the handover procedure with non-contention based random access procedure successfully.

Verify the UE can perform the handover procedure with contention based random access procedure successfully.

# 6.1.2.2 Inter-freq HO with IP data transfer

# 6.1.2.2.1 Test Purpose

Execute handovers between NR Inter-frequency neighbour cells with IP data transfer.

- 1) Perform non-contention based random access procedure and lossless handover.
- 2) Perform Contention based random access procedure and lossless handover.

Verify that the UE supports handover between cells with different bandwidth and is able to maintain the service.

#### 6.1.2.2.2 Reference specification

3GPP TS 38.331 subclause 5.3.5 and 5.5

#### 6.1.2.2.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 6.1.2.2.4 Test conditions

[SS configuration]

Cell A and Cell B are inter-freq NR cells

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell B

Cell Id=2 TAC = 1

MCC = 460 MNC = 00

Frequency Configuration = f2

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell C

Cell Id=3 TAC = 1

MCC = 460 MNC = 00

Frequency Configuration = f3

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active.

NR Cell B is not active.

The test shall be performed under ideal radio conditions.

UE

UE is powered off.

#### 6.1.2.2.5 Test procedure

Table 6.1.2.2.5-1: Time of cell power level and parameter changes

T2	SSS EPRE	dBm/SCS	-85	-97	Not Active	
Т3			-97	-97	-85	

#### **PREAMBLE**

- 1. Activate NR Cell A. The SS configures the transmission of the Master Information Block and starts the System Information Block broadcasting on all cells.
- 2. The SS configures the initial power according to T0 in Table 6.1.2.2.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The UE performs Registration procedure on NR Cell A according to subclause 5.4.1 step3-18. A4 measurement is configured in RRC CONNECTION RECONFIGURATION message.
- 5. Verify the data transmission is performed successfully on Cell A.
- 6. Activate NR Cell B. The SS changes the cell power according to T1 in table 6.1.2.2.5-1.
- 7. The UE performs measurements on the neighbor Cell B and provides measurement reports (Event A4) to the SS.
- 8. The SS initiates a handover to Cell B by sending a RRC CONNECTION RECONFIGURATION message. The RRC CONNECTION RECONFIGURATION message contains CFRA in RACH-ConfigDedicated in order to trigger non-contention based random access to the target cell. Cell B becomes the serving cell and Cell A becomes the new neighbor cell. A4 measurement is configured in RRC CONNECTION RECONFIGURATION message.
- The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message and proceeding CFRA procedure on target Cell B.
- 10. Verify the data transmission is continued on Cell B.
- 11. The SS changes the cell power according to T2 in table 6.1.2.2.5-1.
- 12. The UE performs measurements on the neighbor Cell A and provides measurement reports (Event A4) to the SS.
- 13. The SS initiates a handover to Cell A by sending a RRC CONNECTION RECONFIGURATION message. The RRC CONNECTION RECONFIGURATION message does not contain CFRA in RACH-ConfigDedicated in order to trigger contention based random access to the target cell. Cell A becomes the serving cell and Cell B becomes the new neighbor cell.
- 14. The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message and proceeding CBRA procedure on target Cell A.
- 15. Verify the data transmission is continued on Cell A.
- 16. Activate NR Cell C. The SS changes the cell power according to T3 in table 6.1.2.2.5-1.

- 17. The UE performs measurements on the neighbor Cell C and provides measurement reports (Event A4) to the SS.
- 18. The SS initiates a handover to Cell C by sending a RRC CONNECTION RECONFIGURATION message. Cell C becomes the serving cell and Cell A becomes the new neighbor cell. A4 measurement is configured in RRC CONNECTION RECONFIGURATION message.
- 19. The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message and proceeding CFRA procedure on target Cell C.
- 20. Verify the data transmission is continued on Cell C.

- 21. The SS initiates a de-registration procedure.
- 22. The SS initiates a RRC release procedure.
- 23. Deactivate NR Cell A and NR Cell B.

#### 6.1.2.2.6 Expected Result

Verify the UE can perform the handover procedure with non-contention based random access procedure successfully.

Verify the UE can perform the handover procedure with contention based random access procedure successfully.

# 6.1.2.3 Inter-Freq. HO Failure, RRC Connection Reestablish to a Prepared Inter-Freq cell

#### **6.1.2.3.1** Test Purpose

DRB Setup with a Real Service Ongoing, Two Inter-frequency cells are prepared for handover. Handover to the target cell is failed. A successful RRC reestablish to a prepared Inter-frequency cell is performed. The test scenario is performed several times. Verify the UE is able to maintain the service.

### 6.1.2.3.2 Reference specification

3GPP TS 38.331 subclause 5.3.5, 5.3.7 and 5.5

#### 6.1.2.3.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 6.1.2.3.4 Test conditions

[SS configuration]

Cell A , Cell B and Cell C are NR inter-freq cells.

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -85 dBm/30kHz(adjust according to Table 5.1.1.5-1)

NR Cell B

Cell Id=2 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f2

SS/PBCH SSS EPRE = -125 dBm/30kHz(adjust according to Table 5.1.1.5-1)

NR Cell C

Cell Id=3 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz(adjust according to Table 5.1.1.5-1)

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active.

NR Cell B is not active.

NR Cell C is not active.

8	<b>←</b>	RRC	SS initiates a handover by sending RRC	
			CONNECTION RECONFIGURATION message.	
9	$\rightarrow$	RRC	UE sends the RRC CONNECTION	PASS
			RECONFIGURATION COMPLETE message	
			and success CFRA procedure on target Cell	
			B.	
10			Verify the data transmission is continued on	PASS
			Cell B.	
11			SS changes the cell power according to T2 in	
			table 6.1.2.4.5-1.	
12	$\rightarrow$	RRC	UE performs measurements on the	PASS
			neighbor Cell A and provides measurement	
			reports (Event A4) to the SS.	
13	<b>←</b>	RRC	SS initiates a handover by sending RRC	
			CONNECTION RECONFIGURATION message.	
14	$\rightarrow$	RRC	UE sends the RRC CONNECTION	PASS
			RECONFIGURATION COMPLETE message	
			and success CBRA procedure on target Cell	
			A.	
15			Verify the data transmission is continued on	PASS
			Cell A.	
16	$\rightarrow$	NAS	SS initiates a de-registration procedure.	PASS
	+			
17	+	RRC	SS initiates a RRC release procedure.	
18			Deactivate NR Cell A and NR Cell B.	

# 6.1.2.4.6 Expected Result

Verify the UE can perform the handover procedure with non-contention based random access procedure successfully.

Verify the UE can perform the handover procedure with contention based random access procedure successfully.

# 6.2 Inter-RAT Mobility

# 6.2.1 Inter-RAT cell reselection

# 6.2.1.1 Cell reselection, from NR cell to E-UTRAN cell

### **6.2.1.1.1** Test Purpose

UE could reselect from NR cell to E-UTRAN Cell and perform TAU.

### 6.2.1.1.2 Reference specification

TS 38.304, clause 5.2.4

### 6.2.1.1.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 6.2.1.1.4 Test conditions

[SS configuration]

Cell A is a NR cell, Cell B is an E-UTRAN cell.

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

E-UTRAN Cell B

Cell Id=2 TAC = 2

MCC = 460 MNC = 00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE = -125 dBm/15kHz

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active.

E-UTRAN Cell B is not active.

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 6.2.1.1.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	E-UTRAN Cell B	Remark
T0	-85	Not Active	
T1	-97	-85	

#### **PREAMBLE**

- 1. Activate NR Cell A and E-UTRAN Cell B. The SS configures the transmission of the Master Information Block and starts the System Information Block broadcasting on all cells.
- 2. The SS configures the initial power according to T0 in Table 6.2.1.1.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The UE performs the registration procedure on Cell A according to subclause 5.4.1 step3-18.
- 5. Verify the data transmission is performed successfully on Cell A.
- 6. The RRC connection is released by the SS.
- 7. The SS changes the cell power according to T1 in table 6.2.1.1.5-1.
- 8. The UE performs TAU and EPS bearer activation in E-UTRAN Cell B.
- 9. Verify the data transmission is performed successfully on E-UTRAN Cell B.

#### **POSTAMBLE**

- 10. The SS initiates a DETACH procedure.
- 11. The SS initiates a RRC release procedure.
- 12. Deactivate NR Cell A and E-UTRAN Cell B.

Table 5.1.1.5-2: Message Sequence

Step			Message Sequence		Verdict
	U-S	Layer	Message	Specific Contents	
1	+	RRC	SS Activates NR Cell A and E-UTRAN Cell B		
2			SS configures the initial power according to		
			T0 in Table 6.2.1.1.5-1.		
3		UE	Switch On UE	AT Command

### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, E-UTRAN Cell B, NR Cell C and NR Cell D.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 6.2.1.6.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell B (see 36.508, 4.5.2 ).

# MAIN BODY

- 5. The SS changes cell power according to T1 in table 6.2.1.6.5-1.
- 6. UE performs the registration procedure for mobility on NR Cell C.

- 7. The UE is powered OFF.
- 8. Deactivate E-UTRAN Cell A, E-UTRAN Cell B, NR Cell C and NR Cell D.

Table 5.1.1.5-2: Message Sequence

Step			Message Sequence		Verdict
	U-S	Layer	Message	Specific Contents	
1	+	RRC	Activate E-UTRAN Cell A, E-UTRAN Cell B, NR		
			Cell C and NR Cell D.		
2			SS configures the initial power according to		
			T0 in Table 6.2.1.4.5-1		
3		UE	Switch On UE AT Command		
4	$\rightarrow$	NAS	The UE performs the registration procedure		PASS
	<b>←</b>	RRC	with activation of the initial default EPS		
			bearer on Cell B (see 36.508, 4.5.2 ).		
5			The SS changes cell power according to T1 in		
			table 6.2.1.4.5-1.		
6	$\rightarrow$	NAS	UE performs the registration procedure for		PASS
	<b>←</b>		mobility on NR Cell C.		
7			The UE is powered OFF		
8			Deactivate E-UTRAN Cell A, E-UTRAN Cell B,		
			NR Cell C and NR Cell D		

### 6.2.1.6.6. Expected Result

Step 4 UE selects the E-UTRAN Cell A and camps on the Cell A Step 6 UE performs the registration procedure for mobility on NR Cell C.

# 6.2.2 Inter-RAT Handover

### 6.2.2.1 Inter-RAT Handover from NR to E-UTRAN cell

# 6.2.2.1.1 Test Purpose

Setup a real PS service (e.g. streaming). The UE executes handovers from NR cell to E-UTRAN cell multi-times. Verify the UE is able to maintain the service.

# 6.2.2.1.2 Reference specification

3GPP TS 38.331 subclause 5.4 and 5.5 3GPP TS 36.331 subclause 5.4 and 5.5

# 6.2.2.1.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

#### 6.2.2.1.4 Test conditions

[SS configuration]

Cell A is a NR cell, Cell B is an E-UTRAN cell.

NR Cell A

Cell Id=1 TAC = 1

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

E-UTRAN Cell B

Cell Id=2 TAC = 1

MCC = 460 MNC = 00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE = -125 dBm/15kHz

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active.

E-UTRAN Cell B is not active.

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 6.2.2.1.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	E-UTRAN Cell B	Remark
T0	-85	Not Active	
T1	-97	-85	
T2	-85	-91	

### **PREAMBLE**

- 1. Activate NR Cell A and E-UTRAN Cell B.The SS configures the transmission of the Master Information Block and starts the System Information Block broadcasting on all cells.
- 2. The SS configures the initial power according to T0 in Table 6.2.2.1.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

4. The UE performs Registration procedure on NR Cell A according to subclause 5.4.1 step3-18.

- 5. Verify the data transmission is performed successfully on Cell A.
- 6. The SS sends RRC Connection Reconfiguration message to setup inter-RAT measurement (Event B2).
- 7. The UE sends RRC Connection Reconfiguration Complete message.
- 8. The SS changes the cell power according to T1 in table 6.2.2.1.5-1.
- 9. The UE performs measurements on the neighbor Cell B and provides measurement reports (Event B2) to the SS.
- 10. The SS sends an RRC Connection Reconfiguration message to order the UE to perform inter-RAT handover from NR Cell A to E-UTRAN Cell B.
- 11. The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message on target E-UTRAN Cell B.
- 12. Verify the data transmission is continued on E-UTRAN Cell B.
- 13. The SS sends RRC Connection Reconfiguration message to setup inter-RAT measurement (Event B2).
- 14. The UE sends RRC Connection Reconfiguration Complete message.
- 15. The SS changes the cell power according to T2 in table 6.2.2.1.5-1.
- 16. The UE performs measurements on the neighbor NR Cell A and provides measurement reports (Event B2) to the SS.
- 17. The SS sends an RRC Connection Reconfiguration message to order the UE to perform inter-RAT handover from E-UTRAN Cell B to NR Cell A.
- 18. The UE completes the HO procedure by sending the RRC CONNECTION RECONFIGURATION COMPLETE message on target Cell A.
- 19. Verify the data transmission is continued on NR Cell A.
- 20. Repeat steps 6 to 19 four times.

- 21. The SS initiates a de-registration procedure.
- 22. The SS initiates a RRC release procedure.
- 23. Deactivate NR Cell A and E-UTRAN Cell B.

Table 5.1.1.5-2: Message Sequence

Step			Message Sequence		Verdict

			and NR Cell C.	

### 6.3.2.6 Expected Result

Verify the UE could reselect from E-UTRAN Cell to NSA P-Cell.

# 6.3.3 P-Cell Handover with SCG change, Data continuity

### **6.3.3.1** Test Purpose

Setup a real PS service (e.g. streaming). The UE perform P-Cell-P-Cell handover with SCG change.

### 6.3.3.2 Reference specification

3GPP TS 36.331 subclause 5.3.5 3GPP TS 38.331 subclause 5.3.5

# 6.3.3.3 Applicability

This test applies to the device that supports NSA or SA+NSA.

### 6.3.3.4 Test conditions

[SS configuration]

CellA and Cell B are E-UTRAN Cells, CellC and Cell D are NR Cells.

Cell A and Cell B supports NSA.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

Frequency Configuration = f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

E-UTRAN Cell B

Cell Id=02 TAC = 02

MCC-MNC = 460-00

Frequency Configuration = f2

rootSequenceIndex = 8

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell C

Cell Id=03 TAC = 01

MCC = 460 MNC = 00

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell D

Cell Id=04 TAC = 02

MCC = 460 MNC = 00

Frequency Configuration = f2

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

E-UTRAN Cell B is not active

NR Cell C is not active

NR Cell D is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 6.3.3.5 Test procedure

Table 6.3.3.5-1: Time of cell power level and parameter changes

# 6.3.6.6 Expected Result

Verify the data transmission is continued after handover.

# 6.3.7 SCG change with P-Cell remain the same, Data continuity

# 6.3.7.1 Test Purpose

Test to verify the support of SCG change when data transmission keep continuous.

# 6.3.7.2 Reference specification

3GPP TS 38.331 subclause 5.3.5

# 6.3.7.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

#### 6.3.7.4 Test conditions

[SS configuration]

CellA is E-UTRAN Cells, Cell B and Cell C are NR intra-frequency cells.

Cell A and Cell B supports NSA.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

Frequency Configuration = f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell C

Cell Id=03 TAC = 02

MCC = 460 MNC = 00

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B and Cell C are not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

## 6.3.7.5 Test procedure

Table 6.3.7.5-1: Time of cell power level and parameter changes

Time	Parameter	Unit	E-UTRAN Cell A	NR Cell B	NR Cell C	Remark
T0	SS/PBCH, SSS EPRE	dBm/SCS	/	-90	Not Active	
	Reference Signal EPRE	dBm/15kHz	-85	/	/	

T1	SS/PBCH, SSS EPRE	dBm/SCS	/	-100	-90	
	Reference Signal EPRE	dBm/15kHz	-85	/	/	

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A and NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 5.1.1.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. Verify the data transmission is performed successfully on NR Cell B.
- 10. Active NR Cell C. The SS changes cell power according to T1 in table 6.3.7.5-1.
- 11. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to perform SCG change with reconfigurationWithSync on NR Cell C.
- 12. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 13. Verify the data transmission is performed successfully on NR Cell C.

- 14. The SS initiates a Detach procedure.
- 15. The SS initiates a RRC release procedure.
- 16. Deactivate E-UTRAN Cell A, NR Cell B and NR Cell C.

Table 6.3.3.5-2: Message Sequence

Step	Message Sequence				Verdict
	U-S	Layer	Message	Specific

			RAT type "eutra-nr".		

6	$\rightarrow$	RRC	Verify the UE sends UECapabilityInformation	PASS
			message including the RAT type "eutra-nr".	
7	<b>←</b>	NAS	SS sends an RRCConnectionReconfiguration	
		RRC	message containing NR RRCReconfiguration	
			message to add Cell B as NR PS-Cell	
8	$\rightarrow$	RRC	UE sends an	PASS
			RRCConnectionReconfigurationComplete message	
			containing NR RRCReconfigurationComplete	
			message.	
9			Verify the data transmission is performed	PASS
			successfully on NR Cell B.	
10			Active NR Cell C. The SS changes cell power	
			according to T1 in table 6.3.7.5-1.	
11	+	RRC	SS sends an RRCConnectionReconfiguration	
			message containing NR RRCReconfiguration	
			message to perform SCG change with	
			reconfigurationWithSync on Cell D	
12	$\rightarrow$	RRC	UE sends RRCConnectionReconfigurationComplete	PASS
			containing NR RRCReconfigurationComplete.	
13			Verify the data transmission is continued	
			successfully on NR Cell D.	
14	$\rightarrow$	NAS	SS initiates a Detach procedure.	PASS
	<b>←</b>			
15	+	RRC	SS initiates a RRC release procedure.	
16			Deactivate E-UTRAN Cell A, NR Cell B and NR Cell C.	

# 6.3.7.6 Expected Result

Verify the data transmission is continued after SCG change.

# 6.3.8 Inter-band SCG change with P-Cell unchanged, Data continuity

#### 6.3.8.1 Test Purpose

Test to verify the support of inter-band SCG change from n41 cell to n79 cell when data transmission keep continuous.

## 6.3.8.2 Reference specification

3GPP TS 38.331 subclause 5.3.5

## 6.3.8.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

## 6.3.8.4 Test conditions

[SS configuration]

CellA is E-UTRAN Cells, Cell B and Cell C are NR intra-frequency cells.

Cell A and Cell B supports NSA.

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

FDD LTE Band 3

Frequency Configuration = f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR Band n41

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell C

Cell Id=03 TAC = 02

MCC = 460 MNC = 00

NR Band n79

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

## Band configuration:

- Cell A is LTE Band 3. Cell B is NR Band n41. Cell C is NR band n79

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B and Cell C are not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

## 6.3.8.5 Test procedure

The same as in 错误!未找到引用源。

## 6.3.8.6 Expected Result

Verify UE support NSA band combination B3+n41 and B3+n79.

Verify the data transmission keep continuous after SCG change.

# 6.3.9 Inter-band SCG change with P-Cell unchanged, Voice Call and Data continuity

#### 6.3.9.1 Test Purpose

Setup a real voice call on MCG and PS service on SCG. Test to verify the support of inter-band SCG change from n41 cell to n79 cell when voice call and data transmission keep continuous.

## 6.3.9.2 Reference specification

3GPP TS 36.331 subclause 5.3.5

3GPP TS 38.331 subclause 5.3.5

## 6.3.9.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

This test applies to the device that supports VoLTE

#### 6.3.9.4 Test conditions

[SS configuration]

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

TD-LTE Band 39

Frequency Configuration = f1
rootSequenceIndex = 0
Reference Signal EPRE= -85 dBm/15kHz
upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR Band n41

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell C

Cell Id=03 TAC = 02

MCC = 460 MNC = 00

NR Band n79

Frequency Configuration = f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

# Band configuration:

- Cell A is TD-LTE Band 39. Cell B is NR Band n41. Cell C is NR band n79

[Initial conditions]

SS

E-UTRAN Cell A is not active

E-UTRAN Cell B is not active

NR Cell C is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

## 6.3.9.5 Test procedure

Table 0-1: Time of cell power level and parameter changes

Time	Parameter	Unit	E-UTRAN Cell A	NR Cell B	NR Cell C	Remark
T0	SS/PBCH, SSS EPRE	dBm/SCS	/	-90	Not Active	
	Reference Signal EPRE	dBm/15kHz	-85	/	/	
T1	SS/PBCH, SSS EPRE	dBm/SCS	/	-100	-90	
	Reference Signal EPRE	dBm/15kHz	-85	/	/	

## **PREAMBLE**

1. Activate E-UTRAN Cell A and NR Cell B. The SS configures the corresponding Master Information Block and System Information Block broadcast.

- 2. The SS configures the initial power according to T0 in Table 5.1.1.5-1.
- 3. The UE is powered ON.

#### MAIN BODY

- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. Trigger VoLTE call. UE inititaes the PDN connectivity procedure for the IMS PDN and Default EPS procedure for IMS PDN is completed in Cell A.
- 10. IMS Registration is successful in Cell A
- 11. The UE performs the IMS MO call procedure defined in TS 36.508 table 4.5A.6.3-1.
- 12. Trigger donwlink data transmission. Verify the data transmission is performed successfully on NR Cell B.
- 13. Active NR Cell C. The SS changes cell power according to T1 in Table 0-1.
- 14. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to perform SCG change with reconfigurationWithSync on NR Cell C.
- 15. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 16. Verify the voice call and data transmission is performed successfully on NR Cell C without interruption.

## **POSTAMBLE**

- 17. Stop voice call and data transmission.
- 18. The SS initiates a Detach procedure.
- 19. The SS initiates a RRC release procedure.
- 20. Deactivate E-UTRAN Cell A, NR Cell B and NR Cell C.

### 6.3.9.6 Expected Result

Verify UE support NSA band combination B39+n41 and B39+n79.

Verify the voice call and data transmission keep continuous after SCG change

# 7 Service

## 7.1 Voice

# 7.1.1 Redirection from NR to E-UTRAN, MO call, SA mode.

## 7.1.1.1 Test Purpose

Verify that the UE will make a VoNR MO call, then redirection from NR to E-UTRAN.

## 7.1.1.2 Reference specification

TS 36.508, TS 38.508, TS 34.229-1

# 7.1.1.3 Applicability

This test applies to type 1 and 2 devices as described in clause 4.2.

This test applies to the device that supports VoNR&VoLTE

	<b>←</b>		defined in TS 36.508 table 4.5A.6.3-1.		
10		UE	Switch OFF UE	AT Command	
11			Deactivate E-UTRAN Cell A and NR Cell B.		

# 7.1.3.6 Expected Result

Step 4, UE could select E-UTRAN Cell A and camp on the E-UTRAN Cell A.

 $\label{thm:configuration} Step \ 6, UE \ sends \ an \ RRCConnection Reconfiguration Complete \ message \ containing \\ NR \ RRCReconfiguration Complete \ message.$ 

Step 9, The UE performs the IMS MO call procedure defined in TS 36.508 table 4.5A.6.3-1.

# 7.1.4 VolTE MT Call with E-UTRAN Cell, UE works in NSA mode

# 7.1.4.1 Test Purpose

Verify that the UE will make a VoLTE MT call with E-UTRAN cell.

# 7.1.4.2 Reference specification

TS 36.508, TS 34.229-1

# 7.1.4.3 Applicability

This test applies to type 1 and 3 devices as described in clause 4.2.

This test applies to the device that supports VoLTE

## 7.1.4.4 Test conditions

[SS configuration]

Cell A is E-UTRAN Cell, CellB is a NR Cell.

Cell A supports NSA and VoLTE

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

E-UTRA Band = 3

EARFCN= f1

rootSequenceIndex TDD = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

IMS VolTE Feature should be enabled on DUT

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 7.1.4.5 Test procedure

Table 7.1.4.5-1: Time of cell power level and parameter changes

Time	Parameter	E-UTRAN Cell A	NR Cell B
Т0	SS/PBCH	-85	-90
	SSS EPRE		

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 7.1.4.5-1.
- 3. The UE is powered ON

#### MAIN BODY

- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2 ).
- 5. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell.
- 6. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 7. UE inititaes the PDN connectivity procedure for the IMS PDN and Default EPS procedure for IMS PDN is completed in Cell A.
- 8. IMS Registration is successful in Cell A
- 9. The UE performs the IMS MT call procedure defined in TS 36.508 table 4.5A.7.3-1.

- 10. The UE is powered OFF
- 11. Deactivate E-UTRAN Cell A and NR Cell B.

# 9.1.6.6 Expected Result

The Current Should be less than [TBD]mA

# 9.2 RRC Connection mode

# 9.2.1 Connected Mode, Power Consumption

# 9.2.1.1 Connected Mode, Power Consumption, SA

# 9.2.1.1.1 Test Purpose

When UE is in RRC Connected State after Registering in NR cell, Measure the power consumption.

### 9.2.1.1.2 Reference specification

TS 38.304, TS 38.331, TS 38.300

### 9.2.1.1.3 Applicability

This test applies to the device that supports SA or SA+NSA.

#### 9.2.1.1.4 Test conditions

[SS configuration]

Cell A is a NR Cell.

Cell A supports only SA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

### 9.2.1.1.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	Remark
ТО	-90	

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.2.1.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2 till Step 18 ).

5. Verify that Data tranfer(Ping) perofrmed on NR cell A

### MAIN BODY

6. Wait for 3 minutes and then start power consumption tester records the changes of current and voltage for another 3 minutes

#### **POSTAMBLE**

- 7. The SS initiates a Deregitration procedure.
- 8. The SS initiates a RRC release procedure.
- 9. Deactivate NR Cell A.

Table 5.1.1.5-2: Message Sequence

### 9.2.1.2.6 Expected Result

Record the average current in step 5 (current without DRX) and step 9 (current with DRX). The Current with DRX should be less than the current without DRX.

Table 9.2.1.2.6-1: Test Results

Test Step	Average Current(mA)
Step 5: without DRX	
Step 9: with DRX	

# 9.2.1.3 Connected Mode with DRX on SCG, Power Consumption, NSA

# 9.2.1.3.1 Test Purpose

When UE is in RRC Connected State after Registering in E-UTRAN and NR cell, measure the power consumption with DRX configured on SCG cell.

### 9.2.1.3.2 Reference specification

TS 38.304, TS 38.331, TS 38.300

# 9.2.1.3.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2

#### 9.2.1.3.4 Test conditions

[SS configuration]

Cell A is E-UTRAN Cell, CellB is a NR Cell.

#### Cell A supports NSA

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

LTE Cell A and NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 9.2.1.3.5 Test procedure

Table 9.2.1.3.5-1: Time of cell power level and parameter changes

Time	E-UTRAN Cell A	NR Cell B	Remark
T0	-85	-90	

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.2.1.3.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with SCG DRB.

8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message

### MAIN BODY

- Keep the LTE RRC connection and NR RRC connection without DRX configured. Wait for 1
  minutes and then start power consumption tester records the changes of current for
  another 3 minutes.
- 10. Stop power consumption measurement.
- 11. SS transmits RRCConnectionReconfiguration to configure specific DRX parameters on SCG NR Cell B. The DRX parameters are the same as in Table 9.2.1.2.5-3
- 12. UE transmits RRCConnectionReconfigurationComplete
- 13. Wait for 1 minutes and then start power consumption tester records the changes of current for another 3 minutes
- 14. Stop power consumption measurement.

- 15. The SS initiates a Deregitration procedure.
- 16. The SS initiates a RRC release procedure.
- 17. Deactivate E-UTRAN Cell A and NR Cell B.

# 9.2.2 Inter Frequency Handover, Power Consumption, LTE to LTE

### 9.2.2.1 Test Purpose

The UE Executes the handovers between Inter-Frequency LTE cells for many times with contention based random access procedure and verify the power consumption.

# 9.2.2.2 Reference specification

TS 36.300, TS 36.331, TS 38.300

### 9.2.2.3 Applicability

This test applies to the device that supports NSA or SA+NSA.

#### 9.2.2.4 Test conditions

[SS configuration]

Cell A and CellB are E-UTRAN Cells, CellC is a NR Cell.

Cell A supports NSA

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

upperLayerIndication-r15=true

E-UTRAN Cell B

Cell Id=02 TAC = 02

MCC-MNC = 460-00

EARFCN= f2

rootSequenceIndex = 22

Reference Signal EPRE= -125 dBm/15kHz

upperLayerIndication-r15=true

NR Cell C

Cell Id=03 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A and Cell B are not active

NR Cell C is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

### 9.2.2.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	E-UTRAN	E-UTRAN	NR	Remark
	Cell A	Cell B	Cell C	
T0	-85	-infinity	-90	Cell B shall be off
T1	-91	-85	-90	Cell B better than Cell
				A
T2	-85	-91	-90	Cell A better than Cell
				В

- 1. Activate E-UTRAN Cell A, NR Cell C.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.2.4.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell C as NR PS-Cell with Split DRB.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.

9. Verify that Data tranfer(Ping) perofrmed on NR cell C

#### MAIN BODY

- 10. The SS initiate the RRCConnectionReconfiguration procedure to configure the A4 measurement event to measure cell B
- 11. The SS changes the power levels according to T1 in Table 9.2.4.5-1.
- 12. The UE perrforms measurements on Cell B and provides measurement reports (Event A4) to SS
- 13. The SS initiates the handover procedure to Cell B with adding and releasing same PS-Cell(NR Cell C) and RRCConnectionReconfiguration doesn't contain a dedicated PRACH preamble to make Contention based RACH procedure in cell B
- 14. The UE completes the Handover in Cell B by sending RRCConnectionReconfiguration Complete to the SS
- 15. Measure the minimum, maximum, average power consumption during the random access procedure between step 13 and 14.
- 16. Verify that Data transfer(Ping) performed on NR Cell C
- 17. The SS initiate the RRCConnectionReconfiguration procedure to configure the A4 measurement event to measure cell A
- 18. The SS changes the power levels according to T2 in Table 9.2.4.5-1
- 19. The UE perrforms measurements on Cell A and provides measurement reports (Event A4) to SS
- 20. The SS initiates the handover procedure to Cell A with adding and releasing same PS-Cell(NR Cell C) and RRCConnectionReconfiguration doesn't contain a dedicated PRACH preamble to make Contention based RACH procedure in cell A
- 21. The UE completes the Handover in Cell A by sending RRCConnectionReconfiguration Complete to the SS
- 22. Measure the minimum, maximum, average power consumption during the random access procedure between step 20 and 21.
- 23. Verify that Data transfer(Ping) performed on NR Cell C
- 24. Get the value of power consumption tester and calulate the power consumption
- 25. The handover procedure between 10 to 24 are repeated for four times
- 26. Calculate the overall minimum, maximum and average power consumption values

# **POSTAMBLE**

- 27. The SS initiates a Detach procedure.
- 28. The SS initiates a RRC release procedure.
- 29. Deactivate E-UTRAN Cell A, Cell B and NR Cell C.

#### Table 9.2.2.55.1.1.5-2: Message Sequence

Step		Message Sequence

# 9.2.2.6 Expected Result

The Current Should be less than [TBD]mA

# 9.2.3 Inter Frequency Handover, Power Consumption, NR Cell

# 9.2.3.1 Test Purpose

When UE enters inter frequency Handover procedure, Measure the power consumption.

# 9.2.3.2 Reference specification

TS 38.304, TS 38.331, TS 38.300

# 9.2.3.3 Applicability

This test applies to the device that supports SA or SA+NSA.

# 9.2.3.4 Test conditions

[SS configuration]

Cell A and B are inter frequency NR Cell.

Cell A and B supports only SA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 9.2.3.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR	NR	Remark
	Cell A	Cell B	
T0	-90	-95	
T1	-106	-90	For Blind Handover

- 1. Activate NR Cell A and Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.2.5.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2 till Step 18).
- 5. Verify that Data tranfer(Ping) perofrmed on NR cell A.

6. SS reconfigures the cell power level according to T1 in Table 9.2.5.5-1

### MAIN BODY

- 7. Start power consumption tester to record the changes of current and voltage of Handover procedure.
- 8. The SS Send RRC Reconfiguration message to make Handover from Cell A to Cell B
- 9. Verify that RACH procedure is successful and UE send RRC Reconfiguration complete in Cell B
- 10. Get the value of power consumption tester between step 8 and 9
- 11. The SS Send RRC Reconfiguration message to make Handover from Cell B to Cell A
- 12. Verify that RACH procedure is successful and UE send RRC Reconfiguration complete in Cell A
- 13. Get the value of power consumption tester between step 11 and 12
- 14. Repeat Step 8 to 13 for four times and calculate the overall average power consumption at the time of Handover procedure

- 15. The SS initiates a Deregitration procedure.
- 16. The SS initiates a RRC release procedure.
- 17. Deactivate NR Cell A.

#### 9.4.1.2.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	Remark
Т0	-90	

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.4.1.2.5-1.

- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2 till Step 18).

### MAIN BODY

- 5. The power consumption tester records the changes of current.
- 6. Setup a TCP session and verify that UE uploads data correctly. Verify that UE TX power meeting the requirement in test conditions. Keep the service for 5 minutes
- 7. Get the value of power consumption tester during step 6 and calculate the average TCP throughput
- 8. Repeat Step 6 and 7 for one more time
- 9. Calculate the overall average power consumption and TCP throughput

#### **POSTAMBLE**

- 10. The SS initiates a Deregistration procedure.
- 11. The SS initiates a RRC release procedure.
- 12. Deactivate NR Cell A.

Table 5.1.1.5-2: Message Sequence

Step	Message Sequence			Verdict	
	U-S	Layer	Message	Specific Contents	
			Connect the power consumption tester to		
			the UE		
1	+	RRC	Activate NR Cell A.		
2			SS configures the initial power according to		
			T0 in Table 9.4.1.2.5-1.		
3		UE	Switch On UE	AT Command	
4	$\rightarrow$	NAS	UE performs the registration procedure (see		PASS
	<b>←</b>	RRC	38.508, Table 4.5.2.2 till Step 18).		
5			Power consumption tester records the		
			chnages of current and voltage		
6	+	UE	UE uploads the data correctly in NR Cell A.		PASS
			Keep services for 5 minutes		
7			Get the power concumption tester values		
			and note down the TCP throughput value		
8			Repeat step 6 and 7 for one more times		
9			Calculate the overall average power		
			consumption value and TCP Data throughput		
			value		
10	$\rightarrow$	NAS	SS initiates a Deregistration procedure.		PASS
	<del>(</del>				
11	+	RRC	SS initiates a RRC release procedure.		
12			Deactivate NR Cell A.		

### 9.4.1.2.6 Expected Result

Record the average TCP throughput and current in the following Table. The Current Should be less than [TBD]mA

Table 9.4.1.2.6-1: Average throughput and current

UL TCP Throughput(Mbps)	Average Current(mA)

# 9.4.1.3 Power Consumption with UL Data Transfer, SA (UL Single Tx - 256 QAM)

### 9.4.1.3.1 Test Purpose

Setup a Data bearer with NR cell with maximum transmit level at UE. Measure the power consumption when UE transmits TCP data with uplink 256QAM

### 9.4.1.3.2 Reference specification

TS 38.508, TS 38.331, TS 38.300

### 9.4.1.3.3 Applicability

This test applies to Type 1 and Type 2 devices as described in clause 4.2.

### 9.4.1.3.4 Test conditions

[SS configuration]

Cell A is a NR Cell.

Cell A supports SA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 9.4.3.3.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	Remark
T0	-90	

# **PREAMBLE**

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.4.3.3.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2 till Step 18).

# MAIN BODY

- 5. The power consumption tester records the changes of current.
- Setup a TCP session and verify that UE downloads and uploads the data simultaneously.
   Verify that UE TX power meeting the requirement in test conditions. Keep the service for 5 minutes
- 7. Get the value of power consumption tester during step 6 and calculate the average TCP throughput

- 8. Repeat Step 6 and 7 for one more time
- 9. Calculate the overall average power consumption and TCP throughput

## **POSTAMBLE**

- 10. The SS initiates a Deregistration procedure.
- 11. The SS initiates a RRC release procedure.
- 12. Deactivate NR Cell A.

# 9.4.4.4 Power Consumption with UL Data Transfer, NSA (MCG & SCG – 256 QAM)

# 9.4.4.4.1 Test Purpose

Setup a MCG & SCG data bearer with with typical transmit level in a NSA cell. Measure the power consumption when UE transmits TCP data with a power of 23 dBm for both LTE and NR cell

## 9.4.4.4.2 Reference specification

TS 36.508, TS 38.331, TS 38.300

## 9.4.4.4.3 Applicability

This test applies to the device that supports NSA or SA+NSA.

## 9.4.4.4.4 Test conditions

[SS configuration]
Cell A is E-UTRAN Cell, CellB is a NR Cell.
Cell A supports NSA

E-UTRAN Cell A
Cell Id=01 TAC = 01
MCC-MNC = 460-00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

RB Allocation UL = Full

UL Modulation / Coding = 27

P\_Max = 23 dBm UL 64QAM = TRUE

upperLayerIndication-r15=true

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

RB Allocation UL = Full

UL Modulation / Coding = 27

mcs-Table in PUSCH-Config = qam256

 $P_Max = 23 dBm$ 

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

## 9.4.4.4.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	E-UTRAN Cell A	NR Cell C	Remark
TO	-85	-90	

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.4.4.4.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with SCG DRB in addition with MCG bearer.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.

## MAIN BODY

- 9. The power consumption tester records the changes of current.
- 10. Setup a TCP session and verify that UE uploads data correctly. Verify that data transfer happening in both MCG and SCG bearers. Verify that UE TX power meeting the requirement in test conditions. Keep the service for 5 minutes
- 11. Get the value of power consumption tester during step 10 and calculate the average throughput at transpport layer
- 12. Repeat Step 9 to 11 for two more time
- 13. Calculate the overall average power consumption and throughput at the transport level

- 14. The SS initiates a Detach procedure.
- 15. The SS initiates a RRC release procedure.
- 16. Deactivate E-UTRAN Cell A and NR Cell B.

TO	-85	-75	

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.4.5.4.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with SCG DRB in addition with MCG bearer.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.

## MAIN BODY

- 9. The power consumption tester records the changes of current.
- 10. Setup a TCP session and verify that UE uploads data correctly. Verify that data transfer happening in both MCG and SCG bearers. Keep the service for 5 minutes

- 11. Get the value of power consumption tester during step 10 and calculate the average throughput at transport layer
- 12. Repeat Step 9 to 11 for two more time
- 13. Calculate the overall average power consumption and throughput at the transpport layer

- 14. The SS initiates a Detach procedure.
- 15. The SS initiates a RRC release procedure.
- 16. Deactivate E-UTRAN Cell A and NR Cell B.

Setup a MCG & SCG data bearer with with typical transmit level in a NSA cell. Measure the power consumption when UE transmits and receives UDP data simultaneously with a power of 23 dBm for both LTE and NR cell

#### 9.4.6.4.2 Reference specification

TS 36.508, TS 38.331, TS 38.300

## 9.4.6.4.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

#### 9.4.6.4.4 Test conditions

[SS configuration]

Cell A is E-UTRAN Cell, CellB is a NR Cell.

Cell A supports NSA

E-UTRAN Cell A

Cell Id=01 TAC = 01

MCC-MNC = 460-00

EARFCN= f1

rootSequenceIndex = 0

Reference Signal EPRE= -85 dBm/15kHz

RB Allocation UL = Full

RB Allocation DL = Full

UL Modulation / Coding = 27

DL Modulation / Coding = 27

UL 64QAM = TRUE

DL 256QAM = TRUE

 $P_Max = 23 dBm$ 

upperLayerIndication-r15=true

DL MIMO = 2X2

NR Cell B

Cell Id=02 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE = -125 dBm/30kHz

RB Allocation UL = Full

RB Allocation DL = Full

UL Modulation / Coding = 27

mcs-Table in PUSCH-Config = qam256

DL Modulation / Coding = 27

mcs-Table in PDSCH-Config = qam256

P Max = 23 dBm

DL MIMO = 4X4

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in NSA mode.

[Initial conditions]

SS

E-UTRAN Cell A is not active

NR Cell B is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

## 9.4.6.4.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	E-UTRAN Cell A	NR Cell C	Remark
TO	-85	-75	

#### **PREAMBLE**

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 9.4.6.4.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".
- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with SCG DRB in addition with MCG bearer.
- 8. The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.

# MAIN BODY

- 9. The power consumption tester records the changes of current.
- 10. Setup a UDP session and verify that UE downloads and uploads data simultaneously. Verify that data transfer happening in both MCG and SCG bearers. Verify that UE TX power meeting the requirement in test conditions. Keep the service for 5 minutes
- 11. Get the value of power consumption tester during step 10 and calculate the average throughput at transport layer
- 12. Repeat Step 9 to 11 for two more time
- 13. Calculate the overall average power consumption and throughput at the transport layer

- 14. The SS initiates a Detach procedure.
- 15. The SS initiates a RRC release procedure.
- 16. Deactivate E-UTRAN Cell A and NR Cell B.

**PREAMBLE** 

- 1. Activate E-UTRAN Cell A, NR Cell B.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to test conditions.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure with activation of the initial default EPS bearer on Cell A (see 36.508, 4.5.2).
- 5. The SS sends an ue-CapabilityRequest including the RAT type "eutra-nr".
- 6. Verify the UE sends UECapabilityInformation message including the RAT type "eutra-nr".

#### MAIN BODY

- 7. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with SCG DRB and configure DL BWP and UL BWP with BWP-ID=1 and bandwidth=100MHz. Refer to Table 9.6.1.5-1 and Table 9.6.1.5-2 for BWP parameters
- The UE sends an RRCConnectionReconfigurationComplete message containing NR RRCReconfigurationComplete message.
- 9. Setup uplink TCP session and verify that UE transmits data correctly by using BWP-ID = 1.
- 10. Start power consumption tester records the changes of current for 3 minutes
- 11. Stop power consumption measurement. Stop data transmission
- 12. SS releases RRC connection in both cell A and cell B. UE returns to Idle mode.
- 13. Wait for 2 minutes. The SS transmits a Paging message. UE is in LTE RRCConnected mode.
- 14. The SS sends an RRCConnectionReconfiguration message containing NR RRCReconfiguration message to add Cell B as NR PS-Cell with SCG DRB and configure DL BWP and UL BWP with BWP-ID=1 and bandwidth=20MHz. Refer to Table 9.6.1.5-1 and Table 9.6.1.5-3 for BWP parameters
- 15. Setup uplink TCP session and verify that UE downloads data correctly by using BWP-ID = 1.
- 16. Start power consumption tester records the changes of current for 3 minutes
- 17. Stop power consumption measurement. Stop data transmission

#### **POSTAMBLE**

- 18. The SS initiates a Detach procedure.
- 19. The SS initiates a RRC release procedure.
- 20. Deactivate E-UTRAN Cell A and NR Cell B.

# 9.6.4.6 Expected Result

Record the average current in step 8 and step 14.

Table 9.2.1.2.6-1: Test Results

Test Step	Average Current(mA)
Step 10: BWP=100MHz	
Step 16: BWP=20MHz	

# 10 Data Throughput

## **10.1 Downlink TCP Throughput**

## 10.1.1 DL Throughput under static channel, DL 256QAM, DL4\*4 MIMO

## 10.1.1.1 Test Purpose

To measure the UE application layer downlink performance while downloading TCP based data in Conducted, Static Channel, SA Option2, 100 MHz BW, Full Resource Allocation, 256QAM, DL 4\*4 MIMO

## 10.1.1.2 Reference specification

3GPP TS 38.331, 3GPP TS 38.508, 3GPP TS 38.521-1

#### 10.1.1.3 Applicability

This test applies to Type 2 UEs.

#### 10.1.1.4 Test conditions

[SS configuration]

NR-RAN Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

rootSequenceIndex = 0

DL Modulation / Coding = 27

RB Allocation UL= Full

RB Allocation DL = Full

simultaneousAckNackAndCQI = TRUE

enable4x4MIMO = TRUE

enable256QAM = TRUE

CPConfig = UL: Normal CP/DL: Normal CP

subcarrierSpacing=30kHz

DI/UL switch period=5ms

#### [Common conditions]

Common conditions include a set of test points the UE needs to be tested in and the common test parameters for each transmission mode.

Table 10.1.1.4-1: Test Points Configuration

Test Point	Propagation	Correlation
	Conditions	Matrices
NR-1	Static	N/A

Table 10.1.1.4-2: Test Parameters for Testing

Parameter		Unit	Value
Downlink power	$ ho_{\scriptscriptstyle A}$	dB	-3
allocation	$ ho_{\scriptscriptstyle B}$	dB	-3(Note 1)
$N_{oc}$ at antenna port		dBm/30kHz	-98
Reporting mode			PUCCH 1-0
Note 1: $P_B = 1$			

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 38.508-1 clause 4.1.

Frequencies to be tested: Mid Range, as defined in TS 38.508-1.

- 1. Connect the SS to the UE antenna connectors as shown in TS 36.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 2. Connect an application server to the IP output of the SS configured with a FTP server.
- 3. Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 4. Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

#### 10.1.1.5 Test procedure

#### **PREAMBLE**

- 1. SS Activates NR-RAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits PDSCH via PDCCH DCI format 1\_0 for C\_RNTI to transmit the DL data using the fixed transport format and transport block size.
- 3. Set the parameters of the propagation condition, the correlation matrix, antenna configuration according to Table 10.1.1.4-1 & Table 10.1.1.4-2.

#### MAIN BODY

- 4. The UE is powered ON.
- 5. UE performs a Registration procedure on NR-RAN Cell A to register for PS services. The UE

establishes the default MCG bearer during the registration according to TS 38.508 subclause 4.5.2.

- 6. The SS transmits an RRC Connection Reconfiguration.
- 7. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 8. Using the FTP client, begin FTP download from the application server for [90] seconds and record Throughput result.
- 9. Repeat step 10 for one more iteration.
- 10. Calculate the average throughput at the application layer on the downlink channel during the file transfer over all iterations.
- 11. Switch Off UE, UE initiates a Detach procedure.

## **POSTAMBLE**

12. Deactivate Cell.

Table 10.1.1.5-1: Message Sequence

Chan	Message Sequence					
Step	U-S	Layer	Message	Specific Contents		
	+	RRC	The SS Activates NR-RAN Cell A configures

Parameter		Unit	Value
Downlink power	$ ho_{\scriptscriptstyle A}$	dB	-3
allocation	$ ho_{\scriptscriptstyle B}$	dB	-3(Note 1)
$N_{\it oc}$ at antenna port		dBm/30kHz	-98
Reporting mode			PUCCH 1-0
$P_p = 1$			

Note 1:  $P_B = 1$ 

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of PUSCH and PUCCH before measurement are specified in Annex G.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 38.508-1 clause 4.1.

Frequencies to be tested: Mid Range, as defined in TS 38.508-1.

- 1. Connect the SS to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.1.1.2 for NR UL MIMO.
- 2. Connect an application server to the IP output of the SS configured with a FTP server.
- 3. Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 4. Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

## 10.2.3.5 Test procedure

#### **PREAMBLE**

- SS Activates NR-RAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits PUSCH via PUCCH DCI format 0\_0 for C\_RNTI to transmit the UL data using the fixed transport format and transport block size.
- 3. Set the parameters of the propagation condition, the correlation matrix, antenna configuration according to Table 10.2.3.4-1 & Table 10.2.3.4-2.

#### **MAIN BODY**

- 4. The UE is powered ON.
- UE performs a Registration procedure on NR-RAN Cell A to register for PS services. The UE
  establishes the default MCG bearer during the registration according to TS 38.508 subclause
  4.5.2.
- 6. The SS transmits an RRC Connection Reconfiguration.
- 7. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 8. Using the FTP client, begin FTP upload from the application server for [90] seconds and record Throughput result.
- 9. Repeat step 10 for one more iteration.
- 10. Calculate the average throughput at the application layer on the uplink channel during the file transfer over all iterations.
- 11. Switch Off UE, UE initiates a Detach procedure.

#### **POSTAMBLE**

## 12. Deactivate Cell.

Table 10.2.3.5-1: Message Sequence

Chair	Message Sequence				
Step	U-S	U-S Layer Message		Specific Contents	
	<b>←</b>	RRC	The SS Activates NR-RAN Cell A configures

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

.

- 1. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 2. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 3. Connect an application server to the IP output of the SS configured with a FTP server.
- 4. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 5. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 6. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 7. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

# 10.4.1.5 Test procedure

#### **PREAMBLE**

- SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.4.1.4-1, Table 10.4.1.4-2, as appropriate. Transmission mode is set to TM3.
- SNR is set according to Table 5.1.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- 6. UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE establishes the default EPS bearer during the registration according to TS 36.508 subclause 4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish MCG & SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the FTP client, begin FTP download from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

#### **POSTAMBLE**

14. Deactivate Cell A and Cell B.

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

Frequencies to be tested: Mid Range, as defined in TS 36.508 & TS 38.508-1 for LTE & NR respectively.

- 1. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 2. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 3. Connect an application server to the IP output of the SS configured with a FTP server.
- 4. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 5. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 6. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 7. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

## 10.4.2.5 Test procedure

#### PREAMBLE

- 1. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.4.2.4-1, Table 10.4.2.4-2, as appropriate. Transmission mode is set to TM3.
- SNR is set according to Table 10.4.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE
  establishes the default EPS bearer during the registration according to TS 36.508 subclause
  4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish MCG & SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the FTP client, begin FTP download from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

# **POSTAMBLE**

14. Deactivate Cell A and Cell B.

Table 10.4.2.5-1: Message Sequence

Cton	Message Sequence						
Step	U-S	Layer	Message	Specific Contents			
	+	RRC	The SS Activates E-UTRAN Cell A configures				
1			the corresponding Master Information Block				
			and System Information Block broadcast

11			Repeat Step 10		
12	SS		Calculate Average Throughput		PASS
13			Switch Off UE	AT Command	
14	SS		Deactivate Cell A & Cell B		

## 10.4.2.6 Expected Result

- 1. Calculate and record the average downlink TCP throughput.
- 2. Calculate and record the average downlink throughput in MAC layer in SCG cell and MCG cell respectively
- 3. Count and record the overall number of ACK and NACK/DTX on the PUSCH/PUCCH during the test interval.
- 4. The average downlink throughput at the application layer shall meet or exceed the value in following table.

Expected DL TCP Band **Test Point** Expected DL MAC Expected DL MAC Throughput Combination Throughput Throughout in in MCG SCG B3+n41 NSA-1 **FFS FFS FFS** FFS B3+n41 **FFS** NSA-2 **FFS**

#### [Common conditions]

Common conditions include a set of test points the UE needs to be tested in and the common test parameters for each transmission mode.

Table 10.4.3.4-1: Test Points Configuration

Test Point	Propagation Conditions	Correlation Matrices
------------	------------------------	----------------------

NSA-1 Static	N/A
--------------	-----

Table 10.4.3.4-2: Test Parameters for Testing

Parameter		Unit	Value
Downlink power	$ ho_{\scriptscriptstyle A}$	dB	-3
allocation	$ ho_{\scriptscriptstyle B}$	dB	-3(Note 1)
LTE $N_{oc}^{}$ at antenna po	rt	dBm/15kHz	-98
NR $N_{oc}$ at antenna poi	rt	dBm/30kHz	-98
Reporting mode			PUCCH 1-0

Note 1:  $P_B = 1$ 

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

- .
- 1. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 2. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 3. Connect an application server to the IP output of the SS configured with a FTP server.
- 4. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 5. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 6. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 7. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE is powered off

## 10.4.3.5 Test procedure

#### **PREAMBLE**

- 1. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.4.1.4-1, Table 10.4.1.4-2, as appropriate. Transmission mode is set to TM3.
- 4. SNR is set according to Table 5.1.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- 6. UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE establishes the default EPS bearer during the registration according to TS 36.508 subclause 4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the FTP client, begin FTP download from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

#### **POSTAMBLE**

14. Deactivate Cell A and Cell B.

Table 10.4.4.4-2: Test Parameters for Testing

Note 1:  $\Gamma_B$ 

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

- 1. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 2. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 3. Connect an application server to the IP output of the SS configured with a FTP server.
- 4. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 5. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 6. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 7. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

### 10.4.4.5 Test procedure

#### PREAMBLE

- 1. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.4.2.4-1, Table 10.4.2.4-2, as appropriate. Transmission mode is set to TM3.
- 4. SNR is set according to Table 10.4.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE
  establishes the default EPS bearer during the registration according to TS 36.508 sub clause
  4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the FTP client, begin FTP download from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

Note 1: $P_B = 1$			

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PUSCH and PUCCH before measurement are specified in Annex H.2 of TS 36.521-1.

Configurations of NR PUSCH and PUCCH before measurement are specified in Annex G.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

- 1. Connect the SS to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.1.1.1.
- 2. Connect an application server to the IP output of the SS configured with a FTP server.
- 3. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 4. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 5. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 6. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

## 10.5.1.5 Test procedure

#### **PREAMBLE**

- SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- SS transmits LTE PUSCH via PUCCH DCI format 0 for C\_RNTI to transmit the UL data using
  the transport format and transport block size. SS transmits PUSCH via PUCCH DCI format
  0\_0 for C\_RNTI to transmit the UL data using the fixed transport format and transport block
  size
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.5.1.4-1, Table 10.5.1.4-2, as appropriate. Transmission mode is set to TM3.
- SNR is set according to Table 10.5.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE establishes the default EPS bearer during the registration according to TS 36.508 subclause 4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish MCG & SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the FTP client, begin FTP upload from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the uplink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

## **POSTAMBLE**

# 10.5.2 UL Throughput under static channel, UL 256QAM, NSA

## 10.5.2.1 Test Purpose

To measure the UE application layer uplink performance while uploading TCP based data in

Conducted, Static Channel, NSA Option3, 100 MHz BW, Full Resource Allocation, UL NR 256QAM+LTE 64QAM,data transmission on MCG and SCG simultaneously

### 10.5.2.2 Reference specification

3GPP TS 36.331, 3GPP TS 36.508, 3GPP TS 36.521-1, 3GPP TS 38.331, 3GPP TS 38.508, 3GPP TS 38.521-1

## 10.5.2.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2.

### 10.5.2.4 Test conditions

[SS configuration]
E-UTRAN Cell A,
NR-RAN Cell B

E-UTRAN Cell A,

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

EARFCN= f1

rootSequenceIndex = 0

UL Modulation / Coding = 28

RB Allocation UL= Full

RB Allocation DL = Full

simultaneousAckNackAndCQI = TRUE

enableUI64QAM = TRUE

CPConfig = UL: Normal CP/DL: Normal CP

NR-RAN Cell B,

Cell Id=02 TAC = 01

NR-ARFCN= f1

rootSequenceIndex = 0

UL Modulation / Coding = 27

RB Allocation UL= Full

RB Allocation DL = Full

simultaneousAckNackAndCQI = TRUE

enableUl256QAM = TRUE

CPConfig = UL: Normal CP/DL: Normal CP

## [Common conditions]

Common conditions include a set of test points the UE needs to be tested in and the common test parameters for each transmission mode.

Table 10.5.2.4-1: Test Points Configuration

Test Point	Propagation Conditions	Correlation Matrices
NR-1	Static	N/A

Table 10.5.2.4-2: Test Parameters for Testing

Parameter		Unit	Value
Downlink power	$ ho_{\scriptscriptstyle A}$	dB	-3
allocation	$ ho_{\scriptscriptstyle B}$	dB	-3(Note 1)
LTE $N_{oc}$ at antenna port		dBm/15kHz	-98
LTE $N_{oc}^{}$ at antenna po	rt	dBm/30kHz	-98
Reporting mode			PUCCH 1-0
Note 1: $P_B = 1$			

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PUSCH and PUCCH before measurement are specified in Annex H.2 of TS 36.521-1.

Configurations of NR PUSCH and PUCCH before measurement are specified in Annex G.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

- 1. Connect the SS to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.1.1.1.
- 2. Connect an application server to the IP output of the SS configured with a FTP server.
- 3. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 4. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 5. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 6. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

### 10.5.2.5 Test procedure

#### **PREAMBLE**

- 1. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits LTE PUSCH via PUCCH DCI format 0 for C\_RNTI to transmit the DL data using the transport format and transport block size. SS transmits PUSCH via PUCCH DCI format 0\_0 for C\_RNTI to transmit the UL data using the fixed transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.5.2.4-1, Table 10.5.2.4-2, as appropriate. Transmission mode is set to TM3.
- 4. SNR is set according to Table 10.5.2.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE
  establishes the default EPS bearer during the registration according to TS 36.508 subclause
  4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish MCG & SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the FTP client, begin FTP upload from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

#### **POSTAMBLE**

Table 10.5.2.5-1: Message Sequence

## 10.5.2.6 Expected Result

- 1. Calculate and record the average UL TCP throughput.
- 2. Calculate and record the average uplink throughput in MAC layer in SCG cell and MCG cell respectively
- 3. Count and record the overall number of ACK and NACK/DTX on the PUSCH/PUCCH during the test interval.
- 4. The average uplink throughput at the application layer shall meet or exceed the value in following table.

Table 10.5.2.6-1: Expected Result for EN-DC FDD LTE Band + NR Band

Band	Expected UL TCP Throughput	Expected UL MAC	Expected UL MAC
Combination		Throughput in MCG	Throughput in SCG
B3+n41	[162 Mbps]	[37 Mbps]	[ 125 Mbps]

# 10.5.3 UL Throughput under static channel on SCG, UL 64QAM, NSA

### 10.5.3.1 Test Purpose

To measure the UE application layer uplink performance while uploading TCP based data in Conducted, Static Channel, NSA Option3, 100 MHz BW, Full Resource Allocation, UL NR 64QAM , data transmission on SCG

# 10.5.3.2 Reference specification

Note 1:

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

Frequencies to be tested: Mid Range, as defined in TS 36.508 & TS 38.508-1 for LTE & NR respectively.

- 1. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.

- 3. Connect an application server to the IP output of the SS configured with a UDP server.
- 4. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 5. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 6. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 7. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

### 10.6.1.5 Test procedure

#### **PREAMBLE**

- 1. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.6.1.4-1, Table 10.6.1.4-2, as appropriate. Transmission mode is set to TM3.
- 4. SNR is set according to Table 10.6.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 5. The UE is powered ON.
- 6. UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE establishes the default EPS bearer during the registration according to TS 36.508 subclause 4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish MCG & SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 10. Using the UDP client, begin UDP download from the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink and uplink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

### [Common conditions]

Common conditions include a set of test points the UE needs to be tested in and the common test parameters for each transmission mode.

Table 10.6.2.4-1: Test Points Configuration

Test Point	Propagation	Correlation
	Conditions	Matrices
NSA-1	LTE Fading Profile :	Low
	EPA5 , NR Fading	
	Profile : TDLA30	
NSA-2	LTE Fading Profile : Low	
	EPA5 , NR Fading	
	Profile : TDLB100	
NSA-3	LTE Fading Profile :	Low
	EVA5 , NR Fading	
	Profile : TDLC300	

Table 10.6.2.4-2: Test Parameters for Testing

Parameter		Unit	Value
Downlink power	$ ho_{\scriptscriptstyle A}$	dB	-3
allocation	$ ho_{\scriptscriptstyle B}$	dB	-3(Note 1)
LTE $N_{oc}$ at antenna port		dBm/15kHz	-98
NR $N_{oc}$ at antenna port		dBm/30kHz	-98
Reporting mode			PUCCH 1-0
Note 1: $P_B = 1$			

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

Frequencies to be tested: Mid Range, as defined in TS 36.508 & TS 38.508-1 for LTE & NR respectively.

- 1. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 2. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 3. Connect an application server to the IP output of the SS configured with a UDP server.
- 4. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 5. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 6. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 7. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

## 10.6.2.5 Test procedure

### **PREAMBLE**

- SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 2. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 3. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.6.2.4-1, Table 10.6.2.4-2, as appropriate. Transmission mode is set to TM3.
- SNR is set according to Table 10.6.2.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

### MAIN BODY

- 5. The UE is powered ON.
- UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE
  establishes the default EPS bearer during the registration according to TS 36.508 subclause
  4.5.2(steps 1-16).
- 7. SS Activates NR Cell B.
- 8. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish MCG & SCG.
- 9. UE transmit an RRC Connection Reconfiguration Complete message to SS.

- 10. Using the UDP client, begin UDP download and upload with the application server for [90] seconds and record Throughput result.
- 11. Repeat step 10 for one more iteration.
- 12. Calculate the average throughput at the application layer on the downlink and uplink channel during the file transfer over all iterations.
- 13. Switch Off UE, UE initiates a Detach procedure.

### **POSTAMBLE**

14. Deactivate Cell A and Cell B.

Table 10.6.2.5-1: Message Sequence

Cham		Message Sequence				
Step	U-S	Layer	Message	Specific Contents		
	+	RRC	The SS Activates E-UTRAN Cell A configures			
1			the corresponding Master Information Block

Reporting mode			PUCCH 1-0

Note 1:  $P_B = 1$ 

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

- 15. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 16. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 17. Connect an application server to the IP output of the SS configured with a UDP server.
- 18. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 19. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 20. LTE Propogation conditions are set according to Annex B.0 in TS 36.521-1.
- 21. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

# 10.6.4.5 Test procedure

#### **PREAMBLE**

- 15. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 16. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 17. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.6.1.4-1, Table 10.6.1.4-2, as appropriate. Transmission mode is set to TM3.
- 18. SNR is set according to Table 10.6.1.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

19. The UE is powered ON.

- 20. UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE establishes the default EPS bearer during the registration according to TS 36.508 subclause 4.5.2(steps 1-16).
- 21. SS Activates NR Cell B.
- 22. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish SCG.
- 23. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 24. Using the UDP client, begin UDP download from the application server for [90] seconds and record Throughput result.
- 25. Repeat step 10 for one more iteration.
- 26. Calculate the average throughput at the application layer on the downlink and uplink channel during the file transfer over all iterations.
- 27. Switch Off UE, UE initiates a Detach procedure.

### **POSTAMBLE**

### 10.6.4.6 Expected Result

- 1. Calculate and record the average uplink UDP throughput and downlink UDP throughput.
- 2. Calculate and record the average downlink throughput in MAC layer in SCG cell
- 3. Calculate and record the average uplink throughput in MAC layer in SCG cell
- 4. Count and record the overall number of ACK and NACK/DTX on the PUSCH/PUCCH during the test interval.
- 5. The average downlink and uplink throughput at the application layer shall meet or exceed the value in following table.

Table 10.6.4.6-1: DL Expected Result for EN-DC FDD LTE Band + NR Band

Band Combination	Expected DL UDP Throughput	Expected DL MAC Throughput in SCG
B3_n41	[1.7Gbps]	[1.7Gbps]

Table 10.6.4.6-2: UL Expected Result for EN-DC FDD LTE Band + NR Band

Band Combination	Expected UL UDP Throughput	Expected UL MAC Throughput in SCG
B3_n41	[125Mbps]	[125Mbps]

## 10.6.5 Bidirectional Throughput under fading channel on SCG, NSA

### 10.6.5.1 Test Purpose

To measure the UE application layer Bidirectional performance while downloading & uploading simultaneously UDP based data in Conducted, Static Channel, NSA Option3, 100 MHz BW, Full Resource Allocation, dynamic scheduling based on channel condition, data transmission on SCG

### 10.6.5.2 Reference specification

3GPP TS 36.331, 3GPP TS 36.508, 3GPP TS 36.521-1, 3GPP TS 38.331, 3GPP TS 38.508, 3GPP TS 38.521-1

# 10.6.5.3 Applicability

This test applies to Type 1 and Type 3 devices as described in clause 4.2..

### 10.6.5.4 Test conditions

[SS configuration]
E-UTRAN Cell A,
NR-RAN Cell B

E-UTRAN Cell A,
Cell Id=01 TAC = 01
MCC = 460 MNC = 00
EARFCN= f1
rootSequenceIndex = 0

RB Allocation UL= Full

RB Allocation DL = Full

simultaneousAckNackAndCQI = TRUE

CPConfig = UL: Normal CP/DL: Normal CP

NR-RAN Cell B,

Cell Id=02 TAC = 01

NR-ARFCN= f1

rootSequenceIndex = 0

RB Allocation UL= Full

RB Allocation DL = Full

simultaneousAckNackAndCQI = TRUE

CPConfig = UL: Normal CP/DL: Normal CP

# [Common conditions]

Common conditions include a set of test points the UE needs to be tested in and the common test parameters for each transmission mode.

Table 10.6.5.4-1: Test Points Configuration

Test Point	Propagation	Correlation
	Conditions	Matrices
NSA-1	LTE Fading Profile :	Low
	EPA5 , NR Fading	
	Profile : TDLA30	
NSA-2	LTE Fading Profile :	Low
	EPA5 , NR Fading	
	Profile : TDLB100	
NSA-3	LTE Fading Profile :	Low
	EVA5 , NR Fading	
	Profile : TDLC300	

Table 10.6.5.4-2: Test Parameters for Testing

Parameter		Unit	Value	
Downlink power	$ ho_{\scriptscriptstyle A}$	dB	-3	
allocation	$\rho_{\scriptscriptstyle B}$	dB	-3(Note 1)	
LTE $N_{oc}$ at antenna port		dBm/15kHz	-98	
NR $N_{oc}$ at antenna port		dBm/30kHz	-98	
Reporting mode			PUCCH 1-0	
Note 1: $P_B = 1$				

Note 1:

[UE configuration]

The test USIM shall be inserted.

The UE is in AUTOMATIC network selection mode.

[Initial conditions]

SS

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

Configurations of LTE PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 36.521-1.

Configurations of NR PDSCH and PDCCH before measurement are specified in Annex C.2 of TS 38.521-1.

Test Environment: Normal, as defined in TS 36.508 & TS 38.508-1 clause 4.1 for LTE & NR respectively.

Frequencies to be tested: Mid Range, as defined in TS 36.508 & TS 38.508-1 for LTE & NR respectively.

- 8. Connect the LTE SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 36.508 Annex A, Figure A.10 for antenna configuration 2x2.
- 9. Connect the NR SS, the faders and AWGN noise sources to the UE antenna connectors as shown in TS 38.508-1 Annex A, Figure A.3.2.1.5 for antenna configuration 4x4.
- 10. Connect an application server to the IP output of the SS configured with a UDP server.
- 11. LTE Downlink signals are initially set up according to Annex C.0, C.1 and Annex C.3.2 in TS 36.521-1 and uplink signals according to Annex H.1 and H.3.2 in TS 36.521-1.
- 12. NR Downlink signals are initially set up according to Annex C0, C.1 and Annex C.3.1 in TS 38.521-1 and uplink signals according to Annex G.1 and G.3.2 in TS 38.521-1.
- 13. LTE Propogation conditions are set according to Annex B.O in TS 36.521-1.
- 14. NR Propagation conditions are set according to Annex B.0 in TS 38.521-1.

UE

UE is powered off

# 10.6.5.5 Test procedure

#### **PREAMBLE**

- 15. SS Activates E-UTRAN Cell A configures the corresponding Master Information Block and System Information Block broadcast.
- 16. SS transmits LTE PDSCH via PDCCH DCI format 2A for C\_RNTI to transmit the DL data using the transport format and transport block size.
- 17. Set the parameters of the bandwidth, the propagation condition, the correlation matrix, EN-DC Configuration, Special subframe configuration, antenna configuration according to Table 10.6.2.4-1, Table 10.6.2.4-2, as appropriate. Transmission mode is set to TM3.

18. SNR is set according to Table 10.6.2.4-1. Here SNR = Cell\_power / Noc, in which Cell\_power(EPRE) is a constant of -68dBm/15kHz, following the definition of TS 36.508 & 38.508.

#### MAIN BODY

- 19. The UE is powered ON.
- 20. UE performs a Registration procedure on E-UTRAN Cell A to register for PS services. The UE establishes the default EPS bearer during the registration according to TS 36.508 subclause 4.5.2(steps 1-16).
- 21. SS Activates NR Cell B.
- 22. The SS transmits an RRC Connection Reconfiguration message containing information regarding NR Cell B and to establish SCG.
- 23. UE transmit an RRC Connection Reconfiguration Complete message to SS.
- 24. Using the UDP client, begin UDP download and upload with the application server for [90] seconds and record Throughput result.
- 25. Repeat step 10 for one more iteration.
- 26. Calculate the average throughput at the application layer on the downlink and uplink channel during the file transfer over all iterations.
- 27. Switch Off UE, UE initiates a Detach procedure.

#### **POSTAMBLE**

28. Deactivate Cell A and Cell B.

Table 10.6.5.5-1: Message Sequence

C4	Message Sequence				
Step	U-S	Layer	Message	Specific Contents	
	+	RRC	The SS Activates E-UTRAN Cell A configures		
1			the corresponding Master Information Block		
			and System Information Block broadcast		
2	SS		SS transmits PDSCH via PDCCH DCI format 2A		
			for C_RNTI		
	SS		Set the parameters of the bandwidth,		
			propagation condition, correlation matrix,		
3	EN-DC Configuration, Special subframe				
			configuration and antenna configuration		
4			Cell Power is set		
5	UE		Switch On UE	AT Command	
	$\leftarrow \rightarrow$	NAS	UE performs Registration procedure on		PASS
6		RRC	E-UTRAN Cell A		
7			The SS activates NR Cell B		
0	+	RRC	SS sends RRC Connection Reconfiguration		
8			message		
	$\rightarrow$	RRC	The UE transmits RRC Connection		PASS
9			Reconfiguration Complete message		

10		Using UDP Client begin UDP Download		PASS
11		Repeat Step 10		
12	SS	Calculate Average Throughput		PASS
13		Switch Off UE	AT Command	
14	SS	Deactivate Cell A & Cell B		

# 10.6.5.6 Expected Result

- 6. Calculate and record the average uplink UDP throughput and downlink UDP throughput.
- 7. Calculate and record the average downlink throughput in MAC layer in SCG cell
- 8. Calculate and record the average uplink throughput in MAC layer in SCG cell
- 9. Count and record the overall number of ACK and NACK/DTX on the PUSCH/PUCCH during the test interval.
- 10. The average downlink and uplink throughput at the application layer shall meet or exceed the value in following table.

Table 10.6.5.6-1: DL Expected Result for EN-DC FDD LTE Band + NR Band

Band Combination	Test Point	Expected DL	Expected DL MAC
		UDP Throughput	Throughput in SCG
B3+n41	NSA-1	FFS	FFS
B3+n41	NSA-2	FFS	FFS
B3+n41	NSA-3	FFS	FFS

B3+n41	NSA-2	FFS	FFS
B3+n41	NSA-3	FFS	FFS

# 11 Latency

# 11.1 Latency Basic Tests

## 11.1.1 Control Plane Latency - Basic Test

## 11.1.1.1 Test Purpose

Calculate the latency for different signaling messages exchange between SS and UE

# 11.1.1.2 Reference specification

TS 38.304, TS 38.331, TS 38.300

## 11.1.1.3 Applicability

This test applies to the device that supports SA or SA+NSA.

#### 11.1.1.4 Test conditions

[SS configuration]

Cell A is a NR Cell.

Cell A supports only SA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR Band = n41

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 11.1.1.5 Test procedure

Table 5.1.1.5-1: Time of cell power level and parameter changes

Time	NR	Remark
	Cell A	
T0	-75	

## **PREAMBLE**

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 11.1.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2-2 till Step 20a1).

#### MAIN BODY

- 5. SS initiates paging message to UE
- 6. UE initiates the Rach Procedure to start the service request procedure
- 7. Calculte the time taken between the Rach Request to Msg4
- 8. SS transmits RRC Setup message to UE
- 9. UE sends RRC Setup Complete with Service Request NAS message
- 10. SS sends the Access stratum Security Mode Command to the UE
- 11. UE responds with AS Security Mode Complete to the SS
- 12. Calculate the time taken between Security Mode Command and Security Mode Complete
- SS Transmits RRC Reconfiguration to establish SRB2 and DRB with a Service accept NAS message
- 14. UE sends RRC Reconfiguration Complete to the SS
- 15. The RRC connection is released by the SS. The UE enters Registered, Idle Mode
- 16. Repeat Steps 5 to 15 for 4 times(on 4<sup>th</sup> iteration skip 15<sup>th</sup> step for initiating Deregistration POSTAMBLE step)
- 17. Calculate the average time taken at step 7 and step 12

#### **POSTAMBLE**

- 18. The SS initiates a Deregitration procedure.
- 19. The SS initiates a RRC release procedure.
- 20. Deactivate NR Cell A.

Table 5.1.1.5-2: Message Sequence

Step	Message Sequence				Verdict
	U-S	Layer	Message	Specific Contents	
			Connect the power consumption tester to		
			the UE		
1	<b>←</b>	RRC	Activate NR Cell A.		
2			SS configures the initial power according to		
			T0 in Table 11.1.5-1.		
3		UE	Switch On UE AT Command		
4	$\rightarrow$	NAS	UE performs the registration procedure (see		PASS
	<b>←</b>	RRC	38.508, Table 4.5.2.2-2 till Step 20a1 ).		
5	+	RRC	Paging		
6	$\rightarrow$	RRC/	Rach Procedure to start the Service Request		PASS
	<b>←</b>	MAC	Procedure till msg4		
7			Calculate the time taken between Rach		
			Request to Msg4		
8	<b>←</b>	RRC	RRCSetup		
9	$\rightarrow$	NAS	RRCSetupComplete with Service Request NAS		
		RRC	message		

			1	
10	<b>←</b>	RRC	AS Security Mode Command	
11	$\rightarrow$	RRC	AS Security Mode Complete	
12			Calculate the time taken between Step 10	
			and Step 11	
13	<b>←</b>	NAS	RRCReconfiguration with Service Accept NAS	
		RRC	message	
14	$\rightarrow$	RRC	RRCReconfigurationComplete	PASS
15	<b>←</b>	RRC	RRCRelease	
16			Repeat Steps 5 to Step 15 for 4 times(on 4 <sup>th</sup>	
			iteration skip Step 15)	
17			Calculate the average time taken at Step 7	
			and Step 12	
18	$\rightarrow$	NAS	SS initiates a Deregitration procedure.	PASS
	<b>←</b>			
19	<b>←</b>	RRC	SS initiates a RRC release procedure.	
20			Deactivate NR Cell A.	

# 11.1.1.6 Expected Result

The Average time taken for RACH procedure should be less than [TBD]ms.

The Average time taken for RRC Signaling message pair should be less than [TBD]ms.

# 11.1.2 User Plane Latency – Basic Test

# 11.1.2.1 Test Purpose

Calculate the latency of User plane data exchange between SS and UE

# 11.1.2.2 Reference specification

TS 38.304, TS 38.331, TS 38.300

# 11.1.2.3 Applicability

This test applies to the device that supports SA or SA+NSA.

## 11.1.2.4 Test conditions

[SS configuration]
Cell A is a NR Cell.
Cell A supports only SA

NR Cell A
Cell Id=01 TAC = 01
MCC = 460 MNC = 00

NR Band = n41

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 11.1.2.5 Test procedure

Table 5.1.1.55-1: Time of cell power level and parameter changes

Time	NR Cell A	Remark
ТО	-75	

## **PREAMBLE**

- 1. Activate NR Cell A.The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 11.2.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2-2 till Step 18).

## MAIN BODY

- 5. SS Transmits an ICMP Echo Request packet(PING) to the UE
- 6. UE replies with an ICMP Echo Reply packet to SS
- 7. SS calculates the RTT time it takes for ICMP Echo Request sending and Response reception
- 8. Repeat steps 5 to 7 for 10 times and calculate the average time taken for ICMP Echo Requese transmission and Response reception

- 9. Set the length of PING package to 32 bytes, repeat steps 5 to 8
- 10. Set the length of PING package to 1000 bytes, repeat steps 5 to 8
- 11. Set the length of PING package to 1500 bytes, repeat steps 5 to 8

# **POSTAMBLE**

- 12. The SS initiates a Deregitration procedure.
- 13. The SS initiates a RRC release procedure.
- 14. Deactivate NR Cell A.

Table 5.1.1.5-2: Message Sequence

Step	Message Sequence			Verdict	
	U-S	Layer	Message	Specific Contents	1
			Connect the power consumption tester to		
			the UE		
1	<b>←</b>	RRC	Activate NR Cell A.		
2			SS configures the initial power according to		
			T0 in Table 11.2.5-1.		
3		UE	Switch On UE	AT Command	
4	$\rightarrow$	NAS	UE performs the registration procedure (see		PASS

5	<b>←</b>		ICMP ECHO Request		
6	$\rightarrow$		ICMP ECHO Response		PASS
7			SS calculates the RTT of the PING		
8			Repeat steps 5 to 7 for 10 times and		
			calculates the average time taken		
9			Set the length of PING packets to 32 bytes,		
			repeat step 5 to 8		
10			Set the length of PING packets to 1000 bytes,		
			repeat step 5 to 8		
11			Set the length of PING packets to 1500 bytes,		
			repeat step 5 to 8		
12	$\rightarrow$	NAS	SS initiates a Deregitration procedure.		PASS
	<del>(</del>				
13	<b>←</b>	RRC	SS initiates a RRC release procedure.		
14			Deactivate NR Cell A.		

# 11.1.2.6 Expected Result

The RTT for the ICMP Echo Request and Response should be less than [TBD]ms

# 12 High Speed Train

# 13 Beam Management

## 13.1 Beam Determination – Beam change based on power level

# 13.1.1 Test Purpose

Verify that UE selects better power beam when serving beam power is reduced

## 13.1.2 Reference specification

TS 38.300, 38.331, 38.508

## 13.1.3 Applicability

This test applies to Type 2 devices as described in clause 4.2

## 13.1.4 Test conditions

```
[SS configuration]
Cell A is a NR Cell.
Cell A supports only SA
NR Cell A
Cell Id=01 TAC = 01
MCC = 460 MNC = 00
NR-ARFCN= f1
Bandwidth = 100 MHz
SS/PBCH SSS EPRE for Beam 1 = -125 dBm/30kHz
SS/PBCH SSS EPRE for Beam 2 = -125 dBm/30kHz
[UE configuration]
The test UICC with USIM should be inserted
The UE is in AUTOMATIC network selection mode.
UE works in SA mode.
[Initial conditions]
SS
     NR Cell A is not active
     The test shall be performed under ideal radio conditions.
UE
     UE is powered off
```

# 13.1.5 Test procedure

Table 13.1.5-1: Time of cell power level and parameter changes

Time	NR Cell A	NR Cell A	Remark
	Beam 1	Beam 2	
T0	-75	-98	
T1	-106	-78	

#### **PREAMBLE**

- 1. Activate NR Cell A. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 13.1.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A (see 38.508, Table 4.5.2.2-2 till Step 15 ).

#### MAIN BODY

- 5. Setup donwlink TCP session and verify that UE downloads data correctly on beam ID 1.
- 6. The SS Configures the cell power level according to T1 in table 13.1.5-1
- 7. Setup donwlink TCP session and SS configures the DL DCIs in beam ID 2
- 8. Verify that UE downloads data correctly on beam ID 2.

#### **POSTAMBLE**

- 9. The SS initiates a Deregitration procedure.
- 10. The SS initiates a RRC release procedure.
- 11. Deactivate NR Cell A.

# 13.1.6 Expected Result

UE should able to decode the DCI after beam change is initiated by the network

# 13.2 Beam Sweeping – Initial Access

#### 13.2.1 Test Purpose

When multiple beam is configured and beam sweeping is happening, verify that UE ia able to select any one beam and attach to network.

## 13.2.2 Reference specification

TS 38.331, 38.300, 38.508

## 13.2.3 Applicability

This test applies to Type 2 devices as described in clause 4.2

# 13.2.4 Test conditions

[SS configuration]

Cell A is a NR Cell.

Cell A supports only SA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

SS/PBCH SSS EPRE for Beam 1 = -125 dBm/30kHz

SS/PBCH SSS EPRE for Beam 2 = -125 dBm/30kHz

SS/PBCH SSS EPRE for Beam 3 = -125 dBm/30kHz

SS/PBCH SSS EPRE for Beam 4 = -125 dBm/30kHz

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

# 13.2.5 Test procedure

Table 13.2.5-1: Time of cell power level and parameter changes

Time	NR Cell A	NR Cell A	NR Cell A	NR Cell A	Remark
	Beam 1	Beam 2	Beam 3	Beam 4	
T0	-98	-75	-98	-98	
T1	-75	-98	-98	-98	
T2	-98	-98	-98	-75	

## **PREAMBLE**

- 1. Activate NR Cell A. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to test conditions T0 in table 13.2.5-1 and Beam sweeping is on.
- 3. The UE is powered ON.

#### MAIN BODY

4. The UE performs the registration procedure on Cell A on Beam 2(see 38.508, Table 4.5.2.2-2

till Step 15).

- 5. Initiate ICMP PING request(4 requests) from SS and verify that PING is successful.
- 6. The SS initiates a Deregitration procedure.
- 7. The SS initiates a RRC release procedure.
- The SS Configures the cell power level according to T1 in table 13.2.5-1
- 9. The UE is powered ON.
- 10. The UE performs the registration procedure on Cell A on Beam 1(see 38.508, Table 4.5.2.2-2 till Step 15).
- 11. Initiate ICMP PING request(4 requests) from SS and verify that PING is successful.
- 12. The SS initiates a Deregitration procedure.
- 13. The SS initiates a RRC release procedure.
- 14. The SS Configures the cell power level according to T2 in table 13.2.5-1
- 15. The UE is powered ON.
- 16. The UE performs the registration procedure on Cell A on Beam 4(see 38.508, Table 4.5.2.2-2 till Step 15).
- 17. Initiate ICMP PING request(4 requests) from SS and verify that PING is successful.

#### **POSTAMBLE**

- 18. The SS initiates a Deregitration procedure.
- 19. The SS initiates a RRC release procedure.
- 20. Deactivate NR Cell A.

## 13.2.6 Expected Result

When multiple beams present with different power level during initial attach, verify that UE performs registartion at better beam during initial sweep.

### 13.3 Beam Failure and Recovery

#### 13.3.1 Test Purpose

Veirfy that UE is able to detect the beam failure and recover in same beam as instructed in BFR(Beam failure recovery) parameters

## 13.3.2 Reference specification

TS 38.300, 38.331, 38.508, 38.321

## 13.3.3 Applicability

This test applies to Type 2 devices as described in clause 4.2

### 13.3.4 Test conditions

[SS configuration]

Cell A is a NR Cell.

Cell A supports only SA

NR Cell A

Cell Id=01 TAC = 01

MCC = 460 MNC = 00

NR-ARFCN= f1

Bandwidth = 100 MHz

SS/PBCH SSS EPRE for Beam 1 = -125 dBm/30kHz

beamFailureInstanceMaxCount for Beam1 = n10

beamFailureDetectionTimer for Beam1 = pbfd10

[UE configuration]

The test UICC with USIM should be inserted

The UE is in AUTOMATIC network selection mode.

UE works in SA mode.

[Initial conditions]

SS

NR Cell A is not active

The test shall be performed under ideal radio conditions.

UE

UE is powered off

#### 13.3.5 Test procedure

Table 13.3.5-1: Time of cell power level and parameter changes

Time	NR Cell A	Remark
	Beam 1	
T0	-75	
T1	OFF	

#### **PREAMBLE**

- 1. Activate NR Cell A. The SS configures the corresponding Master Information Block and System Information Block broadcast.
- 2. The SS configures the initial power according to T0 in Table 13.3.5-1.
- 3. The UE is powered ON.
- 4. The UE performs the registration procedure on Cell A Beam1(see 38.508, Table 4.5.2.2-2 till Step 15 ) with RadioLinkMonitoringConfig included in RRC Reconfiguration to check the beam failure.

#### MAIN BODY

- 5. Setup donwlink TCP session and verify that UE downloads data correctly on beam ID 1.
- 6. The SS Configures the cell power level according to T1 in table 13.3.5-1

- 7. Verify that UE doesn't initiate RACH Proceudre for Beam Failure
- 8. The SS Configures the cell power level according to T0 in table 13.3.5-1 before 10 ms(before beamFailureDetectionTimer expiry)
- 9. Setup donwlink TCP session and verify that UE downloads data correctly on beam ID 1
- 10. Verify that UE downloads data correctly on beam ID 1.

#### **POSTAMBLE**

- 11. The SS initiates a Deregitration procedure.
- 12. The SS initiates a RRC release procedure.
- 13. Deactivate NR Cell A.

# 13.3.6 Expected Result

When Beam failure is not exceeding beamFailureDetectionTimer, verify that UE continue to do data transfer in same beam and doesn't initiate the RACH procedure for Beam failure and recovery.
